## LUXE LASER . ANTI-AGING, WRINKLE REDUCTION & SKIN TIGHTENING

For those seeking the latest in safe and effective anti-aging treatments, Luxe Laser and Spa introduces the Exilis Elite.

This FDA approved, non-surgical procedure uses radio frequency technology to restore skin tone and reduce wrinkles for a more toned, youthful appearance.

The environment, aging and gravity all take their toll on our skin. Exilis Elite is able to help reverse some of these changes in our faces and body.

## THE PROACTIVE APPROACH TO ANTI-AGING

Whether you're in your 20's or 40's wrinkle reduction & skin tightening can enhance and protect your appearance.

The radio frequency will stimulate skin cells to produce collagen, reduce wrinkles and improve skin texture.

The benefits of stimulating your own collagen is that collagen is deposited in an orderly, structured manner and that there is no risk of allergy, immune reaction or injection-induced infection.

Therefore, 20-30 year olds can proactively rebuild their collagen, fiber elastins and epidermis prior to lines settling in. While 40-50 year olds can repair years of damage and deeper wrinkles

## THE AGING FACE

On average woman will incur 80% of their sun damage prior to turning 20. At 20, collagen production will decline by 1% per year and skin thickness will decrease roughly 7% every 10 years.

## THE METHOD

Luxe Laser makes use of the ground breaking technology of the Exilis Elite to stimulate collagen production.

## WHAT IS EXILIS ELITE?

Exilis Elite represents the worlds most advanced technology for skin tightening and facial rejuvination.

## WHAT DOES BTL EXILIS ELITE FEEL LIKE?

Clients compare the experience to a warm stone massage. There is little to no pain and no anesthesia or downtime required.

## HOW MANY TREATMENTS ARE REQUIRED?

4-6 treatments depending on the area. Treatments are generally spaced two weeks apart and will require 20-40 min depending on the particular area being treated.

## WHEN SHOULD I EXPECT TO SEE RESULTS?

After the second treatment. Optimal results will be visible 3 months post last procedure.
