

Gingers Spark are very proud to have contributed towards the security on the external doors at the stunning new Alderhey Children's Hospital in Liverpool with their SDGi adjustable mag lock bracket.

As the majority of the doors were very tall, in excess of 2.5 metres, it was critical that the mag locks aligned correctly to ensure the full holding force was maintained all times.

In addition, as the programme required the mag locks and auto door gear to be physically installed before powering up and commissioning took place, the main contractor Laing O'Rourke required assurance that there would be no loss of alignment at commissioning stage.

Due to the infinite adjustability of the SDGi bracket, this was easily achievable and allowed for a very smooth installation and very secure doors. Laings were also very impressed with the aesthetics of the bracket in comparison to a normal L bracket.
