

FEELING TIRED,
ACHY, FAINT, MOODY,
CONSTIPATED,
FATIGUED, ILL, OR
DOWN?

“Molecular hydrogen water
has a promising future as a
safe, simple, inexpensive
therapy for health
maintenance, disease
prevention, and treatment
of our most common health
challenges.”

Dr. Julian Whitaker
Foundation for Alternative and
Integrative Medicine

Hydrogen

Hydrogen is the richest chemical element in the nature. It is also the key to life, aging and death. There will be no life on Earth without hydrogen ions. As the smallest molecule in our universe, hydrogen has a strong penetration power and can reach every organ, tissue and cell in our body.

Hydrogen is the most basic antioxidant. Oxidation happens all the time in our bodies. However, stress in life, cigarette smoking, alcohol, pollution, pesticide residues from food, irregular rest time etc., would accelerate the oxidation process in our body and create an overload of active oxygen. This may result in significant damage to our cell structure and cause malignant diseases and aging in our body. When hydrogen rich water enters into our body, hydrogen molecules selectively binds to active oxygen (Bad ROS) and changes it into harmless water, naturally discharging it from our body

Hydrogen Water Ceramic

Hydrogen water ceramics are innovative multifunctional ceramic materials which can activate water and produce Hydrogen Rich Water

1. The Basic part:
Natural minerals - Maifan Stone, Tourmaline, Muyu Stone and Kaolinite, SiO₂, CaO, Zeolite
2. The Core part:
Oxidation reduction potential (ORP) alloy ceramic materials
3. The Antibacterial materials: ZnO, TiO₂, and CeO₂

Functions

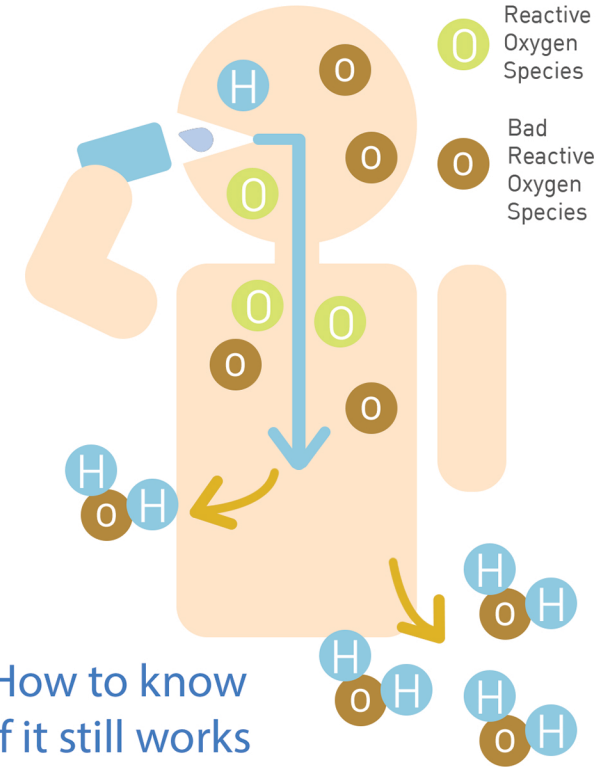

Convert purified water into:

1. Hydrogen Rich Water:
H₂ concentration >500ppb
2. Reduced water: ORP from +200mv to -150mv
3. Weak alkaline water: PH < 8.5
4. Micro-clustered water
5. Mineral water

When first use

1. Place the ceramic in a container. Pour in hot water (minimum 70°C) to at least 2cm above the ceramic
2. When you see small bubbles coming up and/or hear buzz sound from the ceramic, the ceramic has been activated. Disregard the water, the ceramic is ready to be used
3. For a 300-500ml water container with lid covered, let the ceramic sit in room temperature water for 8 to 10 minutes, you can start enjoying hydrogen rich water
4. Ceramic life span: 100L-150L water
1-2 months
5. When NOT in use, put the ceramic away, keep it dry in a container or a bag

How to know if it still works

1. You can see tiny bubbles releasing from the ceramic
2. A more accurate way is to place your ear close to the water container, you can hear buzz sounds coming out from the ceramic

Reactivate it again with hot water when you cannot hear buzz sounds from the ceramic

Test by Accredited Laboratory

The analysis results from Maxxim Lab shows our H₂ rich water is safe to drink by WHO drinking water standards, rich in minerals such as calcium, magnesium as well as microelement Zinc., and with no harmful heavy metal residues such as lead, arsenic, cadmium and chromium
