SALON FOR MEN

ENVIRONMENTAL COMMITMENT

HEAT ISLAND EFFECT

The roofing material used at Dieci Uomo has a high solar reflectance to reduce heat islands effect. This minimizes impacts on microclimates and human and wildlife habitats

OUTDOOR WATER USE REDUCTION

At Dieci Uomo special care was taken in choosing Indigenous plants that do not require permanent irrigation to be used on the property.

ENHANCED REFRIGERATION MANAGEMENT

Zero use of CFC-based refrigerants, which contribute to ozone depletion and global climate change, were used in the buildings heating, ventilating, air conditioning and refrigeration systems

STORAGE & COLLECTION OF RECYCLABLES

Dieci Uomo will have designated areas dedicated for the collection and storage of materials for recycling throughout the entire building.

ENHANCED INDOOR AIR QUALITY STRATEGIES

The ventilation system at Dieci Uomo exceeds indoor air quality requirements.

OUR COMMITMENT TO A GREENER TOMORROW

Creating an eco-friendly green salon for men has been a vision of Paul and Marie Gaglioti for the past several years. The Gaglioti's have constructed a men's salon following the standards set by The Leadership in Energy and Environmental Design (LEED) rating program, developed by the U.S. Green Building Council.

The LEED program issues points to a registered building project based on a variety of construction practices that are both people and planet friendly. Points are earned in 5 categories, Sustainable Sites, Water Efficiency, Energy & Atmosphere, Materials & Resources, and Indoor Environment Quality.

FIRST FLOOR

SECOND FLOOR

SUSTAINABLE SITES

The sustainable sites category include strategies that minimize the impact on ecosystems and water resources. Deci Uomo's site selection had no negative effect on the environment as we renovated a previously developed site. The site is located within a residential area, has pedestrian access, and is within a 1/2 mile of basic services.

To reduce pollution the building is located within a 1/2 mile walking distance of 2 bus lines; the location has a bike rack available for those who wish to bike to the salon; preferred parking is provided for low emitting and fuel efficient vehicles.

Specialized lighting was installed on the exterior of the building that minimizes light trespass, and reduces sky-glow, while improving nighttime visibility through glare reduction. In the interior LED, energy saving ECO- lights were installed.

WATER EFFICIENCY

The water efficiency category promotes smarter use of water, to reduce potable water consumption. Deci Uomo expects to see a 20% reduction in water use with it's low-flow toilets, sinks and shower. Filtered water is provided to guest to reduce bottled water waste.

ENERGY & ATMOSPHERE

The Energy & Atmosphere category promotes better building energy performance through innovative strategies. At Deci Uomo we installed highly efficient HVAC systems to reduce environmental and economic impacts associated with excessive energy use. We also installed highly efficient hot water tank systems.

MATERIALS & RESOURCES

Materials & resources encourages using sustainable building materials and reducing waste. During construction Deci Uomo used local and regional manufactures for building materials. Construction debris such as metals, cardboard, and wood were recycled.

Recycled materials were used during the building process including all interior sheetrock, counter tops made from recycled bottles, steel studs and framing, porcelain tiles and cultured stone on the exterior

INDOOR ENVIRONMENT QUALITY

Indoor Environment quality promotes better indoor air quality and access to daylight and views. At Deci Uomo we selected paints, stains, and coatings that contained no volatile organic compounds (VOC) and adhesives and sealants and flooring with low or no emitting qualities. Low-emitting products release fewer harmful chemicals into the air. Composite wood and agrifiber products used throughout Deci Uomo do not contain any urea-formaldehyde, a toxic chemical.

CO² and airflow measurement equipment; high level controlled light system; and soy based spray insulation for maximum temperature control was installed to help sustain client comfort and well being.

Smoking is prohibited in the building and on the property within 25 feet of entries.

**Our goal is to be the first LEED certified salon in New Jersey and help educate others about the process.*
