st. louis, missouri**

When Parkway discovered asbestos in the building, they hired Landmark to manage the abatement and reconstruction. The students were temporarily relocated to another facility during this project.

Landmark immediately mobilized to begin the abatement process. It was crucial to get the children back into their school in four months.

Landmark first developed a strategic schedule that required shifts to work 24 hours a day, 7 days a week. By managing that schedule, the entire abatement, complete interior demolition and reconstruction for the 57,000 sf building only took 14 weeks. Landmark managed a total of two architects, four engineers, and four contractors during this schedule-intensive project.

The *entire abatement*, complete interior demolition and reconstruction for the **57,000 sf building only took 14 weeks.**
