After beginning to manage the \$75 million project in house, the Donald Danforth Plant Science Center hired Landmark to successfully lead this project.

Four short months later, the project was back within budget, and three months had been shaved off the construction schedule. As Project Managers, Landmark provides the leadership to reduce cost and achieve schedule goals.

The 170,000 sf, one-of-a-kind building includes many features to attract the finest scientists from across the world including:

- 48 research laboratories
- a library
- a lecture auditorium with video-conferencing capabilities
- a cafeteria
- a recreation area
- compartmentalized greenhouses
- environmentally-controlled growth chambers and growth rooms, and
- a multi-story atrium to provide a work environment that allows the scientists to interface and share their research with one another.

As Project Managers, Landmark provides the leadership to *reduce cost* and *achieve schedule goals.*
