

The CoSMo Company Press Release

The CoSMo Company, EDF and Veolia sign contract in urban planning

Lyon June 6th, 2012. The CoSMo Company announced today that they have signed a contract under which they will provide access to their modeling and simulation solution for urban planning to EDF and Veolia. The companies will investigate cooperation and comprehensive collaboration drawing on their respective capabilities in urban planning and complex systems modeling.

Urban modeling, which views cities as an interconnection of networks in continuous interaction (transport, water, wastes, energy...), is a field of application for which the CoSMo technology is particularly effective. The signed collaboration agreements with these major groups in the energy and services to cities sector aims to offer original solutions for the development of sustainable cities. CoSMo's modeling capabilities combined with the business skills of these groups help gain a complete picture of the city by integrating all its components and their interactions in order to make the right decisions for the city of the future (transport networks, land and property assets, water and energy supply...).

About The CoSMo Company

The CoSMo Company, based in Lyon (France), specializes in developing the next generation simulation software to understand, predict and study complex systems. The Company works with academic institutes on problems in a variety of domains ranging from biology, urban planning, and sustainability. Its partners seek to control the complexity of their field through dynamic scenarios to predict their future behavior and make better decisions.

In urban planning The CoSMo Company simulation platform allows integration of specific knowledge and heterogeneous data into models, leading to resolution of concrete urban planning problem via computational simulation
