**Ready when you are.**  
**Dräger Interlock® 7000.**  
Information for responsible entities

Dräger. Technology for Life®

## The Dräger Interlock® 7000 – the right decision.

Highest precision and first-class technology are essential prerequisites for an alcohol interlock. Not only does the Dräger Interlock® 7000 prevent a driver under the influence of alcohol from starting the engine, it also provides seamless data. These serve as reliable basis and facilitate the daily work of the responsible entities.

With our D-Safe data management system, you can access the events of the programme participant at any time. All data and any corresponding images are processed in a clear manner. They can only be viewed by authorised persons. From capture to provision, the data are protected against manipulation attempts. Upon request, D-Safe sends you reports on legally defined events. The presentation of the reports can be adapted to the specific requirements of the responsible entity.

## NO SPACE FOR ERRORS

The Interlock 7000 is the result of our extensive experience in breath alcohol testing. The alcohol ignition interlock device works quickly, reliably, and accurately. You and the programme participant benefit from this – both sides can rely on dependable measurement results. If breath alcohol is detected, the corresponding breath tests are specially marked in the data report. This makes it easier to evaluate them. You can see at a glance which measurement results are uncritical.

The device detects any manipulation attempts. It either prevents the engine from being started or documents any attempts to bypass the device.

If required by law, the alcohol interlock can be equipped with a camera and a GPRS module from Dräger.

All data stored in the Interlock 7000, camera and GPRS module are encrypted. This also applies to the entire communication between D-Safe, the service shop, the GPRS module, if installed, and the control unit.

## YOUR ADVANTAGES AT A GLANCE

### **Proven D-Safe data management system**

- Complete overview and history regarding all stored events of the programme participant
- Better overview through automatic colour identification of certain events (irregularities or breath alcohol detection)
- Failed breath tests can be stored with images
- In the event of irregularities, the Interlock 7000 can synchronise the data promptly with D-Safe via the GPRS module
- Generates reports for defined events and sends them to the authorised person
- Access to the assigned programme participants at all times
- Presentation of the reports can be adapted to specific requirements
- D-Safe training by Dräger experts

### **Reliable technology in the Interlock 7000**

- Manipulation and data security
- Specifically detects alcohol and ensures reliable measurement results
- Breath alcohol detection in accordance with OIML R-126
- Camera fully integrated in the system for documentation and driver change detection
- GPRS module synchronises data with D-Safe automatically and/or upon request via mobile network.

## DRÄGER D-SAFE DATA MANAGEMENT

**Downloaded data are transmitted via GPRS or the service shop**

- Quick data download
- Encrypted data transmission

**D-Safe Server**

- Data is encrypted and tamper-proof
- Immediate access to the data analysis
- Complete overview of all data

**Reports**

- Self-explanatory and clearly structured
- Can be adapted to the requirements of the responsible entity
- Colour identification of irregularities or breath alcohol detection

**Authorised person**

- D-Safe provides a quick overview and facilitates the work
