

Dedicated to a better Brisbane

## Water Safety - Boat Lights

As per section 29 of the *Transport Operations (Marine Safety) Regulation 2004* rowing craft are to display a flashing white all-round light whilst in operation on any Queensland Waterways between sunset and sunrise and during any other periods of low light.

Maritime Safety Queensland (MSQ) have granted an exemption also allowing rowing craft who use the *Brisbane River* to display a minimum 180 degree white flashing light located on the centre line at the stern facing astern and a minimum 180 degree white flashing light on the bow facing forward (see the diagram below).

***Authorities will be on the water enforcing lighting requirements.***

It is important to remember that all river users, including the rowing community have a responsibility to do the following when using the Brisbane River:

- Observe the Code of Conduct – Safe on-water conduct on the Brisbane River (can be found on the RQ website [www.rowingqld.asn.au](http://www.rowingqld.asn.au))
- Make an effort to wear clothing that is reflective to increase visibility
- And the use the lights in the following conditions:
  - Periods of low visibility, such as during heavy rain or periods of fog
  - Periods of low light, including heavily overcast skies
  - Period of time prior to and in the immediate time after sunrise
  - Immediate time prior to and any period of time after sunset
