Dayview V45

Dream House Nightmare Tamed

This dream house is a reality and a practical wonder besides. The home encompasses 9000 square feet of living area complete with every modern convenience. With a dovetailed Mexican tiled roof and stone facade, it is truly representative of the contemporary New West. The estate overlooks the prestigious Ridgepoint Golf Course and provides unimpeded panoramas from all of the larger-than-life view windows.

Bright sunlight bathes the interiors all day long through the large contemporary glass windows, and therein lies a problem. The oversized glass windows allow the "outdoors" in but also permits sunlight, with its intrinsic damaging ultraviolet rays and heat, to come in as well.

Simply put, sunlight is made up of three elements: visible light (44%), ultraviolet light (3%), and infra red (54%) which manifests itself as heat. The combination of heat and ultraviolet rays is responsible for the fading and the deterioration of home furnishings.

Recognizing the sun's shortcomings, the homeowner, a major contractor in Arkansas, sought out the local Vista® dealer. He urgently asked for help in getting protection for his interior furnishings which includes fine leather furniture, expensive rugs, precious antiques, and art.

An on-site survey led to the installation of Vista® VS75 SpectraSelect on all of the sunlit windows. The spectrally

CASE HISTORY

selective film allows the sunlight to shine through and yet takes the 'sting' out of the sun's rays. The film filters out 40% of all solar energy, lets 74% of visible light through, stops 30% of the sun's heat from penetrating through glass, and totally (99.9%) blocks ultraviolet light. On windows where the sun was less obtrusive and the views less critical, Vista® V45 Dayview was installed. While Vista® Dayview blocks all ultraviolet light, it also allows only 45% of visible light to be transmitted.

With over 1200 square feet of invisible solar control window film installed, the family can now fully enjoy their sunlit views safe in the knowledge that all inside furnishings are protected from the "dark" side of the sun.
