RE: State Approval of Recycling Copper Slag Abrasive

Dear Steve:

Attached is a letter I received from the Department of Health Services approving the use of spent copper slag abrasive as an ingredient in the manufacture of cement, asphalt and concrete.

The letter was received in response to my July 9, 1987 letter to them (also attached).

I wish to thank you again for your support and the documentation you provided as to the nature of the material. You will note that I used your letter of June 19, 1987 as an attachment to mine, and identified your product as the major constituent of our spent slag stockpile.

Very truly yours,

Robert A. White
Counsel
