Fulfilling the potential is gated by several milestones that should be achieved in the safety, performance and cost

Developing a serial of complementary means for improving safety, Data analysis and autonomous capabilities

Prototypes are already available

Working along with the CAA to define and comply regulations for civil operation of mini-UAVs

Implementing and Initiating a wide range of new applications in the fields of Law enforcement, remote sensing and infrastructure surveying

Providing aerial sensing services with licensed operators and tailored solutions in order to demonstrate the possibilities and waken the demand
