

RETRO INSTALL – CEILINGS

GUIDE ONLY

- **STEP 1** – Measure the ceiling space for required square metres (As a general rule measure from outside wall to outside wall).

- **STEP 2** – Contact Premier Insulation to purchase insulation and discuss install.

- **STEP 3** – Conduct a pre-install inspection to ascertain whether any preparatory work is required – i.e. roof sheets removed/electrical inspection/clean out old insulation/clean out rubbish. At this stage you should also consider any safety concerns/risk mitigation and plan forward. Tip - check weather report – 2-3 days prior if removing roof line to gain access.

- **STEP 4** – One day prior to starting install, gather together all required tools i.e. ladders, lights, quality knife/blades, crawl board, overalls, mask (P2), rake or extension pole to access tight areas. Best to have it and not need it than the opposite.

- **STEP 5** – Day of install turn off the power at mains board. Consult an electrician if required. Tip – avoid opening fridges/freezers during install, whilst power is off.

- **STEP 6** – Load and install insulation – For ease and safety its best to use a two person team. Ensure the insulation does not interfere with any electrical wiring or components. During the install have available an accurate thermometer to ensure installers do not work in extreme heat conditions – have available sufficient drinking water and take regular breaks. Always have a third person available to check on installers at 30 minute intervals.

- **STEP 7** – On completion of install, remove and dispose of all plastic rubbish/insulation off cuts. Turn the mains power back on and turn on all electrical components including lights, fans, air conditioning and check that all components are correctly operating and have not been interfered with.

- **STEP 8** – If required contact Premier Insulation to conduct a final inspection (for a set cost).

- **STEP 9** – Sit back and enjoy the rewards of your labour and investment.

Remember – If you have any questions in relation to your install please do not hesitate to contact Premier Insulation on 8281 8888. We can attend site and advise where required. If all else fails, we can send one of our experienced installers to the rescue.

IF IN DOUBT – STOP – DO NOT RISK YOUR SAFETY
