

# Our Fiat/Citroen/ Peugeot Range

Fiat

Here Aerodyne offers another exemplary range of Air Management solutions. With options to suit each of the cab and body types, there is a solution for every vehicle, while a variety of heights of Fairing guarantees optimum vehicle streamlining. Since the cabs are based around the same shell, the fuel-saving solutions outlined below are applicable to the Fiat Ducato, the Citroen Relay and the Peugeot Boxer.

## Standard Chassis

Two heights of 3D Fairings are both available with Cab Rear Sidewings offering maximum streamlining potential, as well as improved vehicle aesthetics across the

Fiat/Citroen/Peugeot range. The 3D Fairing ingeniously incorporates an upper collar that will effectively deflect the wind around the body.

## AeroLuton

Part of the popular AeroLuton range, the Pod and Sidewings options are a great addition to the Fiat/Citroen/Peugeot product line-up. A world away from the traditional flat-fronted Luton head, this option pushes the air smoothly over and around the front of the vehicle, whilst improving the vehicle appearance and retaining an exceptionally generous storage facility above the cab. See the AeroLuton pages for more details on this range.

## Specialist Chassis conversion

A purpose-designed kit to suit vehicles with an Al-Ko (or similar) chassis modification provides an excellent solution for specialist catering and exhibition style vehicles.

## Crew Cab

Another unique Aerodyne product, our Adjustable 3D Fairing for the Crew Cab enhances and streamlines this versatile vehicle.
