Comment to " Scientists on trial over L'Aquila deaths " of *Nature News*

Excellent report! The UN published "Bam Earthquake Prediction & Space Technology" in its 2004 yearbook and shared this book to its all member states including Italy during the 42 Session of Scientific and Technical Subcommittee in Vienna from 21 February-4 March 2005. Although no seismological bureau notices the Earthquake Vapor Precursor, it predicted earthquakes exactly, such as the M6.8 Bam, Iran quake on 26 Dec. 2003, M9.1 Sumatra, Indonesia 26 Dec. 2004, M7.6 Kashmir, Pakistan 18 Oct. 2005, M8 Sichuan, China 12 May 2008, M7 Haiti 12 Jan.2010, M9 Tohoku, Japan 11 Mar. 2011, etc. Above clouds have been showed by <http://www.earthquakesignals.com/zhonghao296/table-4.html> The cloud of the M6.3 L'Aquila quake appeared on 30 March 2009. To help Italian people, I will show it by the same link soon zhonghao shou. 2011-06-01 07:59:13 PM
