WASTE STORAGE TANKS

Terracorp Industries Waste Storage Tank is designed for collecting waste from buildings that do not have a sewer connection.

It is a great option to use under transportable buildings and at temporary sites.

It is suitable for use in remote locations where no facility exists to dispose of waste in an environmentally safe way.

Recommended for use on mining sites, construction sites, rural stock camps, army training camps and at special events locations.

The waste tank and frame is certified to engineering certificate no E12468A.

The sturdy steel frame that encapsulates the waste tank is rated to support a building mass up to 8 tonnes.

The waste tank is made from polyethylene with a UV rating of 24 and is not affected by rust, chemicals or effluent waste.

Each tank holds approximately 2000 litres and can be interlocked and connected together to increase waste storage capacity.
