

ICAR

THE ITALIAN FARRIER TOOLS

JUST EXCELLENT

I.C.A.R. has been established in 1970 by three Maniago's craftsmen, very skilled in the production of cutlery, and started its productive activity in 1972.

The main feature of the production is its realization through hot-drop forging of a unique piece of steel, process that gives to the product high mechanical strength and satisfy important technical requirements.

The company has been non-stop technologically updated and in the last years has been equipped with CAD/CAM projecting system and CNC machinery such as Milling machines, EDM wire and plunge machines for the fabrication of the necessary tooling.

Also boasts the use of CNC last generation hammers of German company "LASCO", considered the best machine for precision forging on market and one of them is enslaved by automation system consisting of three manlike robots of the "KUKA", which perform and control the entire cycle of forging.

The ICAR farrier tools are produced entirely in our factory in Maniago - Italy, from the forging of steel to polish and from mold making to packaging of the finished products.

The products ICAR FARRIER TOOLS are now exported all over the world and every day we receive positive feedbacks and thanks for making the work of farriers easier, less tiring and sometimes perhaps more enjoyable, thanks to different types of tools customization that only ICAR offers.

At the moment the company is continuing to work to expand its range of products always trying to stick with what may be the real needs of end users, without compromising on that touch of class that distinguishes the products made in Italy.

The finishing departments are equipped with PLC and CNC machines for the grinding and polishing of surfaces, which ensure a high level of precision and quality.

The manpower is experienced and skilled, capable to perform manual operations with extreme accuracy and to intervene in the mechanized processes with the necessary abilities.

In 2012 the company decided to begin the ICAR FARRIER TOOLS project, starting to produce farrier tools with the intent of creating high-quality products that were able to meet the needs of farriers, their feedbacks combined with the insights of our designers have enabled us to achieve a very high level of quality that is now recognized around the world.

WARRANTY TERMS

ICAR products are guaranteed to be free from defects in materials or manufacturing.

Any tool showing these issues should be promptly reported to the national dealer for authorization to return.

When inspection and test reveal that product is not conforming to manufacturing standards, it will be repaired or replaced or reworked at ICAR option.

Abused, misused, altered without authorisation or simply worn out tools are not covered by this warranty.

WARNING

Safety goggles and every proper precaution should be worn and adopted by the person using the tools and by the other people being in the work area.

Hardened metal surfaces should never hit together.

RECOMMENDATION

At the end of every working day tools should be well cleaned and any debris removed .

Then lubricated with a lubricating oil or joint grease.

ADDITIONAL NOTES

All the tool dimensions given in the catalog are approximate and they could get slight variation because the finishing process is mainly handmade.

100% Made in Italy - our tools are entirely made in our plant in Maniago - Italy, using Italian steel only.
