Investment in a different way.

By and large, the system would make use of the main function to provide reports in stock.

According to the information, the application can quickly identify stocks that are shown to be in the 'golden' stage. This leads to the finding that the 'golden' stage stocks are the ones that can quickly improve the market value. Some information is derived in the results, along with the relations between popular indicators.

The system also provides instruction on how to graph the popular indicators. By reviewing the graph, you will have a clearer view of the market value and the performance of the stocks.

Our project objective is to provide a useful and convenient system to those people interested.
