

The Property of Inequality

I.

I pray that the Transitive Property of Inequality explains / what broke
the love we had, / though I thought our love tied us together
like an ellipse / ["..." means to go on / forever].

You and I are / binaries—0 1 0 1.

Me in this old apartment, you moving to the big city.

II.

To solve an inequality / one must reverse the order
of the inequality— / changing the numeric / from *I don't love you*
to *I'm coming home* / [said quietly] [said again] / *Coming back*.

But you and I are Skew Lines—never parallel, / never intersecting.
How can one get from Troy, Idaho to the Big Apple?

III.

The Power of a Number is found by multiplying
a number by itself / one or more times. / But 1×1 [*me x me*] always
= 1. Since I can't change the number [1 / me] / I never again get
anything to = 2 [us].

An empty set / an empty set, / far past an endpoint.
