

V-Panel™

Pevco's user friendly V-Panel™ allows staff to effortlessly manage pneumatic tube deliveries.

Whether your facility's pneumatic tube system is small or complex, you can customize the Pevco V-Panel to suit your needs.

Twenty Shortcut Keys

Streamline destination and advanced function selection.

Large Display

Clear, easily readable LCD provides more information to reduce errors.

Dedicated Empty Carrier Keys

Carriers are available when and where users need them.

Durable Electronics

Made to meet the demands of around-the-clock hospital operations.

> The V-Panel gives hospital staff access to features once only available from the control center computer. Depending on their individual needs, users and technicians can view the last ten transactions, forward carrier traffic and even initiate an emergency shutdown. The V-Panel's intuitive layout makes features like empty carrier request and return easy to find by providing convenient, individual keys. Up and down arrows allow users to quickly and easily scroll through the advanced options reducing the chance for errors.

Twenty shortcut keys give one button access to regularly used destination addresses and preprogrammed advanced features. Shortcut keys eliminate the need to enter special codes and reduce the time it takes to complete a transaction. V-Panel's integrated directory makes finding destination addresses that are not preprogrammed simple.
