Laura Bellows

Colorado State University

Colorado State University Extension (CSUE) recently launched a new website, Live Eat Play Colorado (LEP; www.liveeatplay.colostate.edu) which promotes traditional CSUE fact sheets as well as new consumer-friendly materials with dense imagery and lower reading levels. LEP has allowed for an increased use of visuals to enrich nutrition and health materials. Appealing visuals serve as tools designed to increase comprehension and memory of health topics (Frisch, Camerini, & Schultz, 2013). Information retention is higher when visuals are combined with text, as opposed to text-only information (Peregrin, 2010). Testing this idea, visuals were placed in the text-only fact sheet, “Nutrition for the Athlete” (231,424 page views in 2014). Google Analytics data revealed that read time increased 23% in the 15 months after visuals were placed compared to the 15 months prior, from an average of 5:32 to 6:50 minutes. The increased read time could suggest that readers are more engaged with information on the webpage and demonstrates the potential positive impact of visuals on web-based education materials. Educators should intentionally select images for fact sheets that will support, reinforce, and/or clarify messages on health topics.

Emily Clyatt is an Extension Student Program Assistant in the Department of Food Science and Human Nutrition and an undergraduate student majoring in Health and Exercise Science at Colorado State University. She has focused her work on the use of visuals in educational materials and trained Extension agents and staff on best practices. Direct correspondence to Emily Clyatt at ecliyatt@rams.colostate.edu

Elisa Shackelton is an Extension Specialist in the Department of Food Science and Human Nutrition at Colorado State University. With 15 years in Extension, her work focuses on the

creation and delivery of online nutrition and food safety resources for optimal target audience engagement.

Laura Bellows is an Assistant Professor and Extension Specialist in the Department of Food Science and Human Nutrition at Colorado State University. During 17 years with Extension, she has focused her work on enhancing communication strategies and educational materials for diverse audiences.
