

Instructions on how to clean your Fog Machine

Directions on how to clean a Fog Machine: Empty out any Fog Juice left inside of the tank. Next fill the tank with 10-31 Store Cleaning Fluid. Run the Fog Machine for 10 minutes in a well ventilated area. The Fog Machine is now clean. Now run Fog Juice back through the Fog Machine. 10-31 Store also recommends running your machine at least every 2-3 months as this fights build up that may occur inside the pump and heater core.

Warning: Do not ever let the Cleaning Fluid sit inside of your Fog Machine for long periods of time as it will result in the damaging of the Fog Machine. Do not drink the fluid or breathe in the mist as it may cause irritation or sickness. Clean up if spilled. If consumed drink plenty of water and consult medical advice. More information can be found @ 10-31Store.com including the MSDS. Any misuse of product will refute any party involved in the selling or making of it.

This guide will help you clean your Fog Machine so that it can continue to work like the day you bought it. Please be advised to never clean your machine in any sort of confined area. It is best to do so outside while standing in an area that you will not breathe the vapors.

Let us get started. Please also have a bottle of Distilled water.

- **First thing is to make sure you are outside with your machine being plugged in and warmed up.**
- **Next take the cap off your cleaner machine fluid and stick the tube that runs into your fog machine tank into the cleaner machine fluid bottle. 'If your machine has an internal tube that cannot be taken out of the tank then first empty out any fog juice inside the tank and replace it with the cleaner machine fluid'**
- **Now that everything is ready to go, run your fog machine for about 10 minutes so that the cleaner machine can began the cleaning process.**
- **After 10 minutes take a cup or container of Distilled Water and run it through your machine for about 5 minutes. 'For internal tanks replace the cleaner machine fluid in the tank with distilled water.'**
- **This process will make sure any particles that broke loose within your machine as well as any cleaner machine fluid left will be cleared out.**
- **Next place the tube back into your machine and run Fog Juice back through your machine. Never let the cleaner machine fluid sit in your tank for long periods of time**
 - **There you have it. A clean fog machine.**
- **Important Note: One of the best ways to keep your machine clean is to use it. We recommend taking your fog machine out every 2-3 months and running it for about 5-10 minutes so that it doesn't freeze up the pump or build up occurs. This is for those Halloween people who use it only once a year.**

Warning: Do not ever drink cleaner Machine fluid or use it in a way that was not recommended by the Manufacture or seller of it. This can cause great harm if done so. Always clean up if spilled or do not use if seal is broken. Call poison control if consumed. MSDS report is available upon request.
