IS YOUR OPERATING ROOM FLOOR A **BREEDING GROUND FOR BACTERIA?**

96% Of All OR Floors Contain More Infectious Biological Matter Than a Public Restroom!

Sharp surgical instruments when dropped will gouge, cut and tear your OR floor. Biological matter, blood contaminants and fungi putrefy within any chip, gouge, or cut in your floor. Daily wash downs will only increase the bacteria growing and in fact, worsen the floors condition. You cannot adequately repair this condition.

This is an actual example of a major medical center's operating room floor. Sharp equipment dropped on it and improper maintenance created cuts and gouges in the floor — exposing the porous sub-surface. Cleaning only increased the contaminant exposure and bacteria levels. The hygienics of the entire OR room was compromised by the floor.

The solution is a completely rebuilt floor installed in just **48 hours!** SurgiTEC's seamless floor systems are designed to stand up to daily wear, to clean easily and to resist staining and chipping. Our floors' appearance and performance will contribute to your facility's commitment to excellence and provide a safe, sterile environment for years to come.

work of art in just one weekend.

Our Advantage

- SSPC Certified Application

Why is SurgiTEC the Best Solution for both New and Replacement Surgical Floors?

With SurgiTEC, your facility will enjoy the long-term benefits of a surgical floor that eliminates costly (continual) repairs and maintenance down-time. Our flooring system will remove your health concerns and maintenance costs related to waxing, buffing, repair of floor gouges, and in-grained floor stains.

Our designs and colors provide a bright and soothing atmosphere for patients and medical staff. The floor surface will provide comfort without compromising durability. Its properties provide exceptional wear and impact resistance in high-traffic areas that are exposed to dropped surgical instruments, continuous heavy medical equipment and cart traffic. With a seamless floor OR tables and carts will roll safely and efficiently, thus reducing personnel and patient hazards. In addition, SurgiTEC Floors provide an unsurpassed resistance to permanent Betadine staining; this ensures your facility will have an aesthetically pleasing environment for the many years to come.

Regardless of your surgical floor requirements, SurgiTEC will provide a total solution that exceeds your needs and expectations. SurgiTEC is the last floor you will ever need.

We Guarantee It

Our Floors Protect Staff, Patients and Assets

Prepare Now for your Next JCAHO Inspection

A SurgiTEC floor specialist will meet with your OR, engineering and hospital staff. We will conduct a Free Site Evaluation, and testing of your surgical flooring. We will insure compliance with standard industry guidelines. In addition, we will provide a free written report to support your budgetary plans and financial considerations. All aspects of your current condition are evaluated to determine issues and the extent of your floor's condition. Our site review examines the are visible condition, and other issues that may not be apparent or currently known.

A Sterile Floor is Not a Luxury . . . It is a Necessity!

In today's changing world, the environment's future is everyone's responsibility. That is why we have developed environmentally friendly products to meet LEED ® requirements for low emitting material. We also continue to develop products that will be ahead of tomorrow's VOC requirements. Since our flooring does not rip or gouge, harsh cleaning chemicals normally used to remove floor contaminants can be altered to safe green choices. Green cleaning agents and SurgiTEC floors are the perfect compliment for your hospital's green program.

Our long lasting durable flooring solutions have been shown to last three times longer that most other popular flooring choices. That means you not only get an exceptional value but your hospital gets a product that can break the cycle of being removed, disposed of and starting the process all over again. At SurgiTEC you get more than just the environmental green logo, you get a company committed to green.

What does your operating room or surgical floors look like? Does your floor surface show wear, gouges and tears from dropped surgical instruments? Are you aware that flooring sub-surface issues may exist that would affect your room's sterile integrity?

Recent studies show that over 96% of all surgical floors contain embedded bacteria, fungi and contaminants that daily wash downs cannot remove. Every stain, gouge, tear or rip will entrap dangerous biological matter, thus posing a serious health concern for your facility. Daily wash downs on outdated and inferior floor materials increase this hazard by driving and accumulating matter into the surface and sub-surface pockets. After a short time, these hosts usually become airborne affecting staff and patients. The harsher the chemicals used to correct the problem, the further removed you are from a healthier and green environment. In fact, in many instances certain "widely used" cleaning agents will further deteriorate your floor.

SurgiTEC Medical Grade Floors are the most comprehensive protection in your medical environment. Our floors will become your first line of upgrading, maintaining and beautifying against the perils of floor resultant infections.

The Last Surgical Grade Floor You Will Ever Need!

All floors are not alike . . . SurgiTEC floors will outlast all others in performance and structural integrity. Not only will your floors have a showroom appearance, they will provide the safety your patients and staff require each and everyday. The reduced maintenance cost our floors offer will provide many years of available funds for other facility projects. If you are considering a new or a replacement floor SurgiTEC's medical grade floors can provide you with increased protection and savings.
