How To Use – Weed Control

Rate	10 – 12.5 fl oz/A
Timing	Preemergence – R6 (full seed)
Spray volume	20 gal/A
Adjuvant	COC @ 1 – 2 pts/A or NIS @ 0.25% v/v based on temperature and relative humidity. Best results are obtained with COC @ 1 pt/A + NIS @ 0.25% v/v + 2 – 4 lbs AMS/A. See label for details. Valent recommends use of a Chemical Producers & Distributors Association-certified adjuvant.
PHI	45 days
REI	12 hours
Roundup Ready PLUS®	<i>Cobra</i> qualifies for Roundup Ready PLUS soybean incentives. See www.RoundupReadyPLUS.com for full details.

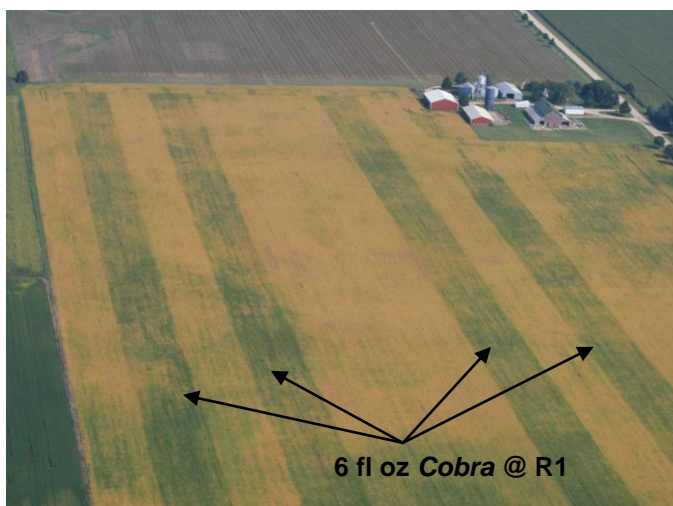

The Power of *Cobra*.™

| Soybeans & White Mold Suppression |

Suppress White Mold

White mold is a common disease found in Midwestern soybean production that, depending on time of infection, can cause significant yield loss. University research has shown a postemergence tank mix of *Cobra* Herbicide applied to soybeans will suppress the development of white mold. Research indicates that after an application of *Cobra*, a soybean plant produces several isoflavones that serve to protect against disease development.

The Picture Says it All

White mold infestation
