Meet in Ireland

Dublin Castle

Message from the President

To all delegates,

A warm welcome to the annual SLLS Conference, in Dublin, Ireland.

This year we received a particularly large number of interesting papers and symposia. This clearly reflects the rising importance of SLLS Conferences in particular and the SLLS as a Society in general over the last years.

This support allowed us to offer a very attractive conference programme here in Dublin. It covers a broad spectrum of important themes of longitudinal and life course research: physical, psychological, social developmental and ageing processes and functioning within and across life course stages, from infancy to old age; methods and findings of cohort studies; other sources of longitudinal data, such as panel studies and record linkage; international comparisons; household, and income dynamics; intergenerational transfers and returns to learning; gene-environment interactions; 'mixed', and comparative methods; innovative methodology in design, measurement, data management, analysis and research practice (quantitative and qualitative). With Elizabeth Cooksey, Richard Layte and Rainer Silbereisen, we welcome high profile keynote speakers. Given the high participation rate in this conference, you can expect many opportunities to meet interesting people and to have exciting scientific exchanges.

A lot of work has gone into organising this conference. I therefore would like to thank Cat Westlake in London, and James Williams, Richard Layte, Fiona Burke, and their team in Dublin, who have done a marvellous job in preparing the meeting.

Finally, I would also like to thank all delegates for their continued interest and support of the SLLS, making our Society a lively and important platform for longitudinal and life course research.

Looking forward to meeting you all over the next three days.

Best wishes,

Hans-Peter Blossfeld

President, Society for Longitudinal and Life Course Studies (SLLS)

Cohort & Longitudinal Studies
Enhancement Resources

The UK is home to the world's largest and longest-running longitudinal studies. CLOSER aims to maximise their use, value and impact both at home and abroad. Bringing together nine leading studies, the British Library and the UK Data Service, CLOSER works to stimulate interdisciplinary research, develop shared resources, provide training, and share expertise. In this way CLOSER is helping to build the body of knowledge on how life in the UK is changing – both across generations and in comparison to the rest of the world.
