

Quality Policy

Moonraker Australia is committed to a level of quality workmanship that exceeds our customers' requirements and expectations.

To maintain this Policy, Moonraker Australia has dedicated itself to establish and maintain a Quality Assurance System in line with the requirements of ISO 9001:2008, covering the design, manufacture and supply of military, marine, and land antenna systems, lightning protection systems, buoys and associated products.

Our organisation is devoted to ensuring that this system for continuous improvement is communicated and understood by all employees within our organisation and that the quality system is reviewed and updated to reflect the changing needs of our customers.

The Quality Assurance Manager shall ensure that all employees associated with the manufacture of company products are fully trained and adhere to the requirements of the quality assurance system.

M.P. Kemel
Chief Executive Officer
