

## **Glucose Regulation Complex Testimonials**

**The following are testimonials from people who used Shaklee's new Glucose Regulation Complex during our final product trials. Actual results may vary for each individual.**

I've done many things to try and keep glucose level and the insulin, which is a big part of it, level by eating instead of three larger meals, six smaller meals a day. I eliminated all sugar, all white flour, white bread, simple carbohydrates, gone to eating more protein and less carbohydrates.

My life sort of centered around what I was going to eat every two hours. So, this is freeing me from all of that. Oh, my goodness, it's such a wonderful feeling to know I can live my life.

The potential for this product I feel is enormous – totally enormous. I just see the market as huge because of the concerns out there with our health. So, it's very, very exciting to even think of the potential.

*~ J. Parks (Wisconsin)*

When I first found out that chromium was one of the major ingredients in this product, I was excited, because I'd been doing a lot of reading and research and found that chromium seems to be an ingredient that is really important in maintaining blood sugar levels. And so it was interesting to me that that was the product Shaklee had chosen to use.

In the 30 some years that we've been associated with Shaklee, I just have the greatest confidence in their research, and that they would not even be testing a product that was not safe or that was not going to be effective according to their standards. I'm so excited about the possibilities of this product, not only for me and for my family, but for many other people who have some of the same concerns that I do about health issues.

You know, we talk about helping people to feel better. This is a product that we're going to be able to help them feel better. And I think that's going to be the exciting thing for people as they do begin to share. At least from my perspective right now – I'm looking at it as probably one of the strongest product launches we've ever had.

*~ J. Boltinghouse (Iowa)*

I can tell I'm not hungry as often, and actually the food choices that I'm craving are not sugary carbohydrate type foods. It's more the proteins and the vegetables that are complex carbohydrates, which is a switch for me.

*~ J. Glacken (Illinois)*

I think people are really searching for something safe that they can rely on and they don't have to worry about some of the questionable things that are on the market. I would think that the market potential is just huge for this.
