

Name: _____

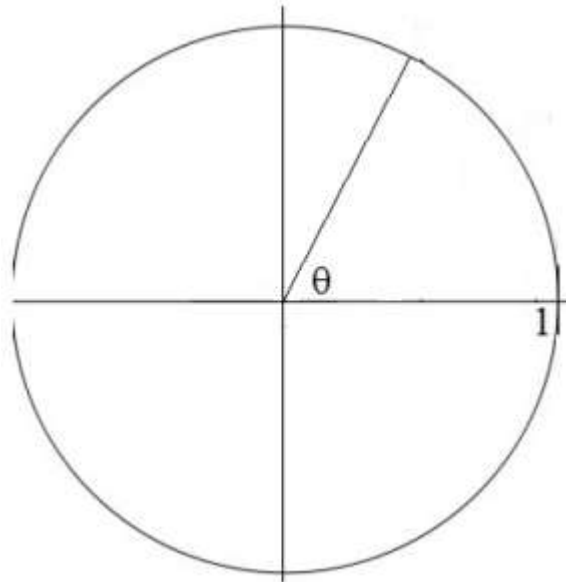

Mathematics 1613: Trigonometry Quiz #4

Problem 12: Complete the unit circle with the coordinates and radian measure of each angle:

Name: _____

Problem 13: Given the following angle on the unit circle, construct and label the lengths corresponding to the six basic trigonometric functions. (You do *not* need to justify, simply label.)

Problem 14: Using the diagram(s) above, derive the identities $\sin^2 \theta + \cos^2 \theta = 1$, $1 + \tan^2 \theta = \sec^2 \theta$, and $1 + \cot^2 \theta = \csc^2 \theta$ (that is, explain why they are true).

Problem 15: Find the length of an arc with a central angle of $\frac{\pi}{5}$ radians on a circle of radius 6 inches.

Problem 16: Use the unit circle to evaluate the following trigonometric values:

$$\cos\left(\frac{5\pi}{4}\right)$$

$$\csc\left(\frac{7\pi}{6}\right)$$

$$\tan\left(\frac{3\pi}{2}\right)$$
