This book has been originally written in Spanish. If there is any change in the information, please go to the text in its original language... Thank you...

The Medicine of the Future

Acknowledgments:

To my son, Lucas Chizzoli, to my soul brother Eduardo Héctor Girbau, to my family and to all my friends who have helped me selflessly...

But in truth, I thank this new information to “existence” which through its operation principle has stimulated me for years, generating inside me, this impulse, this strong will and the necessary approach (being all these indispensable) to take the first steps towards the “understanding” of the electromagnetic operation principle of life...

I thank for this first “look” on to the technological magnificence of existence...

Thank you...

The Medicine of the Future

When reading this book in full, you will find in its first part an easy-reading narrative scientific vision where equivalences will be added later on to observe how wide and rich this science is, with simplified and repetitive concepts that are found at some point for the correct interpretation of how wonderful and simple the electromagnetic operation of life is. And, at the end of the book, you will find very enriching experiences and reports of patients...

It will be explained here how to recover “vitality”, even if you are 90, and how to awake metabolism so that it works as it used to in its best moments. You must know that when you activate these parts, the solution will come naturally...

*To obtain these results, the author has developed an electronic equipment called: **Rebion®**...*

Let yourselves slowly understand it...

Definitions:

- “An illness consists in the inability to generate a specific frequency -one or several- and old people find it difficult to keep such amplitude” ... *Eduardo E. Chizzoli.*
- “Love is a polyharmony in its infinite purity”... *Eduardo E. Chizzoli.*

Straight to the point... How to stay vital with the passing of time?...

Well, keep your Electromagnetic Field “vital with the passing of time”...

Operation principle: Scientific explanation.

Let us start from the beginning to be able to understand how every living being generates an electromagnetic field around...

Let us put the information together:

1°- Our brain generates 0,1 volt (v.).

2°- We have between 6000 to 8000km of nerves inside us.

3°- There is a law in electronics that says (in its reduced and simplified version for an easier comprehension): “There is always an electromagnetic field around any conductor through which a voltage and a current circulates”...

Therefore, 0,1v. and with 6000 to 8000km of nerves which act as conductors inside us, “every living being

generates an electromagnetic field around”, and this field is the equivalent of our: “VITALITY”...

In this EMF (electromagnetic field) there are “vortexes or electromagnetic swirls” that are necessary to interact with the environment, being these responsible for our electromagnetic nutrition or lack of it.

Every illness is the result of a lack of equilibrium or unbalance or every unbalance that lasts in time becomes an illness, therefore: if we preserve this equilibrium with the passing of the time, what we call “illness” will disappear. Everything can be modified from the EMF...

Let us put this in other words: imagine a drop of blood and if this is divided a thousand times, we would obtain a molecule (“a molecule is the smallest part of something without losing their properties”), let us continue: if this molecule is divided a hundred more times (approximately) we shall reach the “atom”, imagine an atom, one next to the other, and another, and another... We may say that we are “just energy”, in its gigantic complexity...

And so as not to disappear as air in the air and preserve our own individuality, we need an infinite number of variables (using electronic language), different tensions, currents, frequencies, amplitudes, etc... Our individual mark, our electromagnetic DNA.

On this basis, this is what I call “illness”: “An illness consists in the impossibility to generate a specific frequency –

one or several – and the impossibility of old people to keep such amplitude”...

To this electromagnetic approach we must add that every human being (biologically speaking) has the necessary knowledge of how to recover from almost any illness, although on many occasions one does not have the vitality needed (go to “old age” on Page 19) or inner strength to undertake such task and revert the so called “illness”.

Let us use a “real” electromagnetic unbalance to explain the operation principle, using “the formula”...

...To reverse: AIDS.

*Technically use: (.....), these values “if” they are real, using them during 4 hours a day, with an antenna through signal, at a distance of 50cm between the equipment and the individual, and placing it under the bed at the waist and during sleep (the pulse rate shall be described herein below). Further information, if there were two people sharing the bed, the equipment must be placed between them being useful for both. **Aids**, do this for at least 2 to 6 months. This will change depending on the time of infection and the illness evolution itself, or more precisely the size of the electromagnetic “stopper” inherent to the illness itself (Figure N° 1) (Page 17)...*

This is in its “basic” form, the electromagnetic formula to revert AIDS...

Complementary information: *With these electronic values, the patient might at the end of the first week, experience certain difficulty to sleep, but without “tiredness”, the patient shall sleep less than he usually does because of the over stimulation and shall experience certain temporary emotional changes due to sensitivity.*

Solution: a good daily walk or practice some sport...

Electronic mathematics are enough to revert Aids, in its basic formula.

A more complex one would contain the formula that is characteristic of depression. This new package of frequencies, (many of them grouped), would give us stability and emotional balance, and adding the data for insomnia, we would obtain the perfect combination to revert AIDS. Likewise, if possible and whenever advised by a physician, physical exercise is recommended.

The old monks who have been practicing martial arts for a long time, discovered that for our body to retain and increase its EMF (energy), it was necessary both a technique to increase the energy (for example, meditation) and physical training...

Let us observe and explain the graphics (Figure 1): When a person is infected with the HIV virus, a person, approximately 5 months later, would have a “stopper” of 3mm x 8mm length, always adopting the shape of a “cone” within these electromagnetic swirls.

If infected 5 to 10 years before and if the person were well treated with a cocktail of drugs and under good health care, this “stopper” would have 19mm x 45mm approximately, or more. And when there is a separation or gap of 1 to 2 mm between this “stopper” and the swirl, the patient would die in twenty days’ time.

To sum up: this “stopper” will grow until it fits and blocks the flow or the normal passing of the energy, at this point, after a few seconds, the body would not be functional any more, and the person would die due to the impossibility of nurturing itself...

Regardless the swirl opening angle, this “stopper” will be floating inside the person becoming bigger and with the passing of time (years), and will block it, bringing about death.

All the whirls observed in persons with HIV, contain a “stopper”, although not all of them have the same size.

*You must know that everything may be modified from the EMF and there are examples everywhere which would help us to understand this... For example, the case with certain children born with a positive viral load who may revert this situation before the first year: they **revert** the illness...*

How?... It is simple... Remember this common saying when we see a newly born, we almost always cannot avoid saying: “how much energy does this baby radiate!”, or witness the irresistible temptation of some mothers when they cannot help biting their babies’ buttocks... This desperation (in the good sense, of course) is a huge electromagnetic attraction, they cannot avoid, (as a magnet) for this “huge” EMF that some babies have at birth.

This small biological body versus the huge EMF in its initial configuration (groups of frequencies and amplitudes), results in “disproportion”. This is the cause of the huge influence of this small body, (due to an over stimulus), in this case: “on the elimination of the viral load”.

*Again on the basis of this “**disproportion**” we shall attain similar results, at any age...*

“What seems strange today, is just what has not been understood yet”.

Let us take another step...

It would be logical to develop this book, writing it in part, as the people would like it while reading it...

But I could not write half the truth...

*I will tell you how I have come to discover “**how to revert AIDS**”.*

I happened to be called in by a lady of about 35 years old, she found it very difficult to preserve both her biological and emotional health.

As she did not know she had AIDS, I explained to her at that moment the way in which every living being generates the EMF, and that regaining its balance, what we call an illness would disappear.

In the presence of her mother I asked permission to “see” and I was allowed to do so. Next I asked her to lie down. Using an equipment designed by myself I had with it the

opportunity to switch from a program to another and modify in its turn the programs related to the micro-controllers. Then, I started to apply on her the different electromagnetic stimulation I knew, observing simultaneously how her body reacted. At one point I “saw” clearly within those whirls (that we need to nurture ourselves) a “stopper” with the shape of a “cone”, oil black, I have never seen such a thing and I did not understand what it meant.

I repeat, in each one of the whirls or vortexes there was a “stopper” and those on her back were relatively bigger. I concentrated on them since they are not part of a normal balanced EMF and changing from one program to the other and even modifying the output power, I watched in a specific moment that these “stoppers” started breaking up.

These “stoppers” are so electromagnetically dense that it is practically impossible to “see” through them.

Description: I am sure you have noticed that in those very dry dirt streets, when a car drives along them, they leave small dust particles suspended in the air... Well, those “stoppers” started to spread like those small dust particles... Imagine one or two particles per second becoming detached from the “cone” expelled outwards by the vortex itself, getting lost in the environment.

In this example, this 35-year-old lady had stoppers of approximately 22mm x 45mm. Later on, I was informed that she has been infected for 10 years and that she was under treatment with a cocktail and good health care.

*Some days later, I modified a **Rebion** equipment with the Electronic characteristics of the program, under one condition:*

we met once a week to “see” and “register” the evolution of her EMF. Week after week, these stoppers became smaller and smaller and at first sight, even the general look of her skin and also her emotional balance just 15 days later evidenced great improvement.

From that moment onwards, I started a more detailed search for these stoppers, “cones” in other persons, which motivated me, with the passing of the years to relate these stoppers to AIDS... (Figure 1).

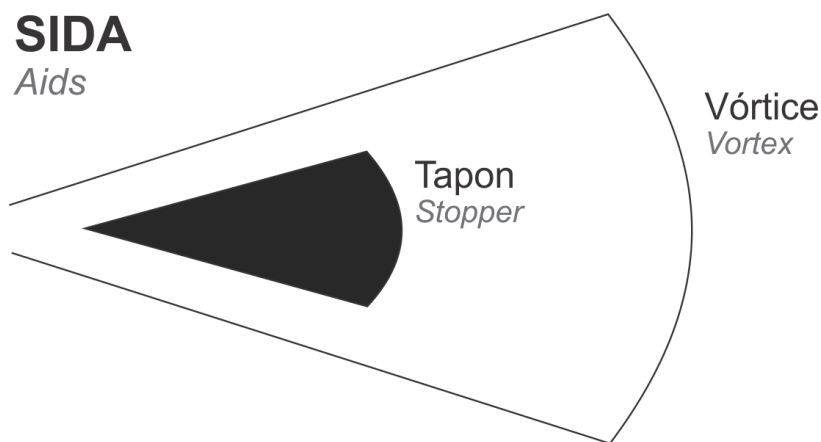

Fig.1

With the advancement of technology, we shall soon be able to “see”, and really “all” in the EMF will become clear, balances and unbalances, and at this point you must remember the definition of illness. “Illness consists in the impossibility to generate a specific frequency...”. If this EMF lacked one or several frequencies, it would become unbalanced and it would be impossible for it to nourish our physical, mental and emotional sides, and these are nourished out of our EMF. Remember that a person’s general state shall depend on the quality and revitalization of the same.

Let us explain this using the example of how a car operates: depending on the type of fuel in the tank, the propulsion of the engine will be different, some good fuel (100 octanes) would be better for the engine than one of a poorer quality (93 octanes). In this last case, the engine would also work but, under difficult conditions, it would not be the same and when using fuel of even a poorer quality (84 octanes), we all know that the engine would still be operating but with the difficulties all experts know: overheating, ostensible lose of power, residue, etc. To sum up, “it would shorten the useful life of he engine”.

*The same happens to us. Depending of the quality and how much vivified our EMF is, we get different results: **QUALITY** of life or lack quality.*

And this is only the beginning, let us enlarge upon this a bit more...

*What id **Old Age**?...*

*Remember the second part of the definition of illness (“... and to keep such amplitude)... As you know our brain generates 0.1v and when we grow older the voltage of the nervous system diminishes. If it were 10% we would have 0.09v. This new tension, (amplitude) would not be enough for a correct electrical stimulus that each one of our parts and organs need for their total regeneration... And this is what we call “**old age**”...*

Let us go back to the example of the motorcar: if a battery of 12v (13.8v to be more precise) would receive 10% less, it would be approximately 11v in the example. With this new electric value, the vehicle would not start and would not work properly... The same happens to us...

Stimulating our body with correct frequencies and amplitudes, our EMF will regain its balance and keep it in time and solution will come naturally and what we call an illness would disappear. The more exact the frequency values (vibration states), the better the results.

*For a better scientific understanding we must remember the definition of LOVE, (“... a poly harmony in its **infinite purity**)...*

*Slowly we are in the process of understanding what is
“**LONGEVITY**”...*

An emotional imbalance is the same:

*Let us explain the concept of “Depression” which is one of the two most common illnesses. The two of them are insomnia and depression. One third of the population of the world (two billion people) suffer from one or the other and depression is **hereditary**... “Through resonance”...*

Why is it hereditary?

Let us enlarge on two subjects to understand how the facts are related:

1°- What is resonance?... A form to explain it is the following: take a guitar, play a musical note, for example “LA”, and right at that moment place near it a musical triangle (the one used to call people when the meal is ready. Hit it with force and the triangle would vibrate in LA, this principle is called “resonance”.

2°- Take an average number of years during which parents and children live together before they move out to study, etc., 20 years of living together, just for illustration purposes.

Lastly, to explain “Depression” let us use a numeric value (which is not real) to describe as specific vibration state

(for example 1000), imagine that to “vibrate” in (1000 Hertz) (hz.) is the equivalent to a state of **“Happiness”**, imagine this situation to be able to explain this principle of operation. A person suffering from depression would be vibrating an octave below (500hz), (a person with some general musical knowledge would understand) and a person with monthly suicide attempts, would be two octaves below, that is (250hz.).

To understand observe the size of the vortex in **“a”**, **“b”**, **“c”** (Fig. 2) together with a symbolic explanation.

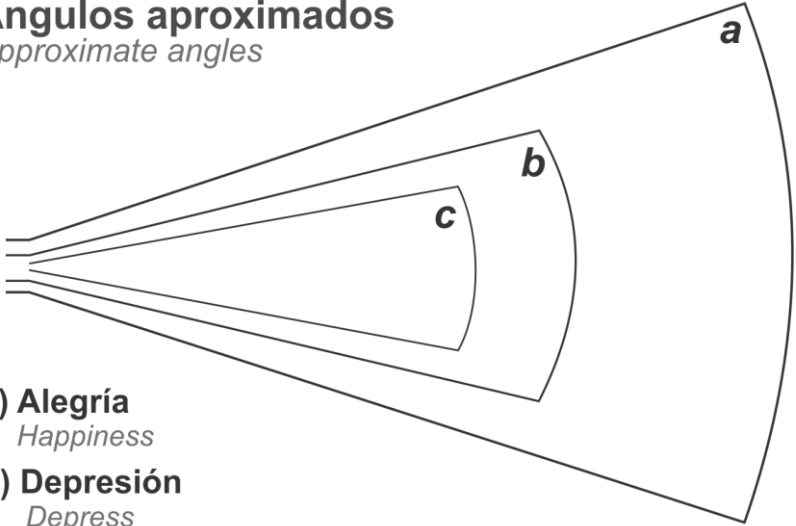

Let us continue with figure 2: A person vibrating in 1000hz, in graphic **“a”**, **happiness** would be the equivalent to be in a big house with big windows through which mountains, forests, sunsets could be seen... Nature. It would be a house where one would be “at ease”. This vortex would allow the correct exchange flow of energy.

Now, a person suffering from depression, in 500hz., in graphic **“b”**, **depression**, would be in the same house, where there would be a small window (symbolically 20cm. x 30cm.). The question is: Could you live in that big house with just a small Windows to “interact” with the external world?... Although oxygen would throw identical values in both cases, one be “short of breath”... Here the vortex would barely fulfil its function.

Now, a person with monthly suicide attempts, would vibrate two octaves below (250hz.), (in graphic **“c”**, **big depression**), in this house there would only be the small opening of a door lock... Question, How you would feel after three months of living in a place like this?, he would “suffocate”... life would lose its sense... There would be no “interaction”...

Ángulos aproximados

Approximate angles

- a) **Alegría**
Happiness
- b) **Depresión**
Depress
- c) **Gran depresión**
Big depression

To sum up: our relation and “interaction” with the environment (with other human beings or with nature) shall depend on the size and angle (opening) of our electromagnetic vortexes.

In this example, it is not that the suicide wants to “harm himself”, it is because his vision is that “he does not find any

sense in life” and therefore he becomes emotionally ill. (as in this example).

The EMF and its vortexes are responsible for our possibility to “experiment” and “interact” electromagnetically with whatever surrounds us.

*How can we revert **Depression**?... Let us generate these 1000hz that are not real and through “resonance” the “depression” shall disappear. Here we take just a value 1000Hz, but we would really need a bunch of frequencies (many of them very accurate) to finally achieve “Happiness”.*

Remember the other issue: Why is Depression hereditary?

Ask yourselves if any of the parents for would vibrate in 500hz due to his depression and is sharing intensely his life with that of his children... Visualize 20 years like that day after day and tour alter tour, 500, 500, 500hz... This situation enhances the possibility that any of his children tunes in 500hz, inheriting “depression” applying the principle of resonance. Why is it that not all the members of the children tune in the same way? Because of several variables, such as the different personalities, nature, character of the children, etc.

Note the responsibility of the elders. It does not mean that the elders are to blame, the children would be the “victims” because if we look at this man or woman in 500hz., he or she in his or her turn would have parents or grandparents, acknowledging which was watching the previous generation.

*It is always like this, through “inheritance” by “resonance”.
(Except for rare exceptions).*

This is the scientific explanation of its operation.

*How can we revert it?... It is simple, generate a vibration state of for example 1000hz., during 2 hours a day during sleep (1000, 1000, 1000hz.) and 48 to 96 hours later, the person shall have a special brightness in his eyes, another impression on her face: “a smile”, and after some time (from 8 to 12 months) he will tune permanently in this state of **“Happiness”**, if his intimate social circle allows him to, it would be more difficult if the person would be still living with his depressive parents (in 500hz), whom should also receive help.*

***To put it in other words, this is the formula of:
“HAPPINESS”...***

*Let us enlarge upon this, if to this symbolic number (1000kz = happiness) we subtracted between 3 and 16 hz, (these small values of 3 to 16hz. **are** real) in the example, we would have from 997hz. to 984hz.). A person who “vibrates” in this range of frequencies, would have a feeling of “grief” and if we applied to him one or two octaves upwards or downwards we would have this “diversity”, this richness of the vibration states or the feelings that are inherent to the human race... The combinations are infinite.*

With “fear” we have the same situation although it corresponds another vortex. Let us take another number which

is not real, (for example 5000hz.), this value would describe a person with “presence”, one who is “self assured”, if this person would vibrate unevenly in 4500hz. for example), he would feel “fear” through “resonance”... As easy as this...

I repeat, in any example this is “the operation principle”...

“Pain” is a sharp emotional mismatch, very often due to traumas, this mismatch is recurrent, so it is necessary to resort to a continuous electromagnetic work to regain the EMF balance. The mathematics for “pain” are the simplest ones... The quality of our lives depends on whether we live with equilibrium or not...

Let us proceed.

Our EMF or “Vitality”, works in full until we are approximately 25 years old. Later on, the way in which we reach a certain age, depends on the way in which we preserve or use our reserves. When vitality drops, our metabolism or mechanism that keeps us healthy, drops as well and there is no “plenitude” in life. Take any example and remember how your physical, mental and emotional components responded to the different stimuli when you were near 25, when your frequencies and amplitudes were optimum and maximum.

Let us enlarge upon this a bit more and we will see how complex and almost magical science is... Allow me to use the word “magic” though it is a science not fully understood.

Let us take a metallic vase. If it is very hot, when observing it with a thermal camera, it would be glowing white UP to a specific distance (mm. according to its temperature). Then, immediately after another color would be observed, the camera would show red, then green, blue..., at different distances. As the camera moves away, the infrared emission of the object (vase) would also be observed and different layers would be seen (colors). Data: The infrared emission (temperature) is a frequency with a 300 nanometers wavelength.

Let us understand the correspondence of this symbolic example...

The same happens in our EMF. It can be observed that there are layers, in other cultures these are called “electromagnetic bodies”, between one “body” and the other there exist until 6 eights of difference (a frequency multiplied by 2, by 2 some 6 times). As they expand, these frequencies of our EMF are more subtle and higher in vibration (frequency), where their functions are. Their vortexes also change their size from one “body” to another up to 6 times, these become “visually” bigger as the frequency increases and therefore their functions become more subtle...

*Remember the definition of love: “...a **polyharmony** (many harmonies) in its infinite purity”...*

Let us analyze these subtleties from the emotional point of view:

- *One of the electromagnetic vortexes is called “Cardiac” vortex following the name given to it in the eastern culture. Among other things, this vortex is responsible for our “happiness or depression” (in the example 1000hz.), this same vortex in a higher level, in a following layer or “body” (some 6 octaves or harmonics x^2 , x^2 ...) is responsible for our “hope”... Expressed from a vibratory state very much higher...*
- *Another of these vortexes is called “Plexus” with the function to give us “self assurance” (in the example of 5000hz.), in a more elevated form (several octaves), would give us “confidence” if the EMF were balanced... One may gain or lose “confidence” depending on the external stimulus or on our internal work, or more precisely, how we “mould” our EMF...*

Our three parts (physical, mental and emotional) have the same electromagnetic operating principle.

From ancient times, this system of action and accumulation of subtle and swirling energy receives the name of “chakras”. These are responsible to nourish or malnourish with energy our three parts... There exists a lot of literature on this subject...

This EMF that surrounds us contains several layers, which in a Eastern language are called “bodies” and circulation and passage ways that are called “channels”.

This set of “chakras”, “bodies” and “channels”, are directly responsible for our physical, mental and emotional health.

The way in which this new science operates is based on our EMF and not on biology as it appears.

When generating artificial, exact and “pure” electromagnetic fields, these would help as an extra tool to: nourish, become subtler and widen our electromagnetic balance which, among other things, would allow us to be more “perceptive”, in this text, construed as a synonym of “intelligence”...

In this example, only the emotional part is included, if we add to this the physical and mental part, you will start to understand the wonderful, simple and complex operation of the EMF.

I was asked what is the limit of this finding and again I remind you of the scientific definition of love, “Love is a polyharmony in its infinite purity”... many frequencies and their multiples, and if these frequencies would become “accurate” beyond imagination, we would be near to attain a signal in its “infinite purity”...

When we feel deep “love”, this sensation that invades us and which abstracts us from everyday reality, is such because we are immersed in a strong “pure” EMF...

Whatever has been expressed so far has its pertaining mathematical equivalence.

To sum up: when we are able to reproduce this EMF, we shall be in the right condition to generate “love” (electromagnetically speaking), to feed on it to be in harmony, to live in and from “it”.

You have already heard this “Love conquers all”... Love is a polyharmony... The more accurate, the better the result...

This was an example in the emotional area.

Something else: this is the scientific and mathematical basis for “LONGEVITY”...

Generate the complete range of “exact frequencies” and you shall guide the different parts of your body (through nutrition) to preserve them in time... Up to what point?... Well, continue to improve the package of frequencies...

In the mental sphere, the operation principle is the same, although my experience in this field is very much reduced. Nevertheless I could explain the case of bipolar people and the great stability they attain when using the Rebion equipment (in the future), programmed with the correct mathematics.

Intelligence is something we inherit in its most part (let us call it genetics) but it is also “a vibration state” unconsciously triggered or induced by some people, “through resonance” from the cradle by our elders or both. This “state of vibration and/or alertness” would help reconfigure the neuronal system... And this “is” also another electromagnetic formula...

The recovery of vitality and/or mental will is another example. Everything is an electromagnetic field, we only need to understand, reproduce and manage it.

This is the mechanism, the electronic way to issue packages of frequencies, that has given us the “method”, the “correct” form to interact in any area: with plants, animals, fish and humans. In their physical, mental and emotional aspects.

Explanation: if a young person enjoying his full youth and vitality used the system (Rebion equipment), he would not experience a big change, if he does not have a headache and takes an aspirin he would perceive no effect!!!, with the electromagnetic stimulus something similar happens. The result is perceived when there is a real need... To adopt a preventive attitude shall generate a future benefit: “health”...

Elderly people find it difficult to “sleep” and suffer because “their body aches”. These are their two main needs and the increasing of their vitality results in the balance longed for. The “worse” the state of the person, the better the “system” would prove its functionality. When properly stimulating their EMF their balance shall be restored almost immediately and the contrast between “poor health state and their new vitality” would shock everybody.

Certainly, some scientists ask themselves if approximately every two years we renew (“regenerate”) our biological body together with illness, why when renewing it, we do it again with the illness, then, ... Where is the information?... The information is in the electromagnetic field...

Remember the definition of “illness”. If our EMF is unbalanced, it will nourish our biology in an unbalanced way and therefore it shall generate an “illness”.

Solution: reach the equilibrium of your EMF...

Instant cures: *more than 20 years of study and investigation have helped me understand the operation of the EMF and what is illness.*

*Like Mr. Nikola Tesla, I first find the solution inside me (finding out “how” in my mind), and then I externalize them. The construction of an equipment to cure people instantly is something totally feasible... Its construction is still **pending**...*

Summary – Technical Characteristics.

- *The antennas were selected on the basis of their “result” and not on the basis of mathematical formulas or calculations.*
- *One antenna per frequency.*
- *The frequency (waves per second), is responsible for the tuning, balances and unbalances generating as a characteristic, a direct relationship with the opening angle (bigger or smaller) of the vortexes (chakras).*
- *The opening is directly proportional to the frequency (vibration state), and to the electromagnetic circulation flow that goes through the same. The greater the rotation speed, the smaller the opening,*
- *Each chakra has a specific base frequency.*
- *The octaves are directly proportional to the chakra opening itself and also to the electromagnetic circulation flow that goes through the same.*
- *In a lower octave, a chakra shall have a lesser proportion (I would say half).*
- *The vortexes or chakras have a very small band width, beyond this width, they do not respond to an external stimulus in a short period of time and “cannot” tune to resonance, but they “do” respond to changes, to a strong internal unbalance, reaching varied electronic values as varied as human beings are (conducts – attitudes, etc.).*

- *The forms of the pulse modifies results.*
- *The pulse width determines the rotation speed of the electromagnetic whirl (chakra) and therefore the saturation of the EMF, this over-stimulus is the one used for some time for the annihilation of the virus.*
- *The wider the pulse width the more the expansion of the EMF expansion, when over nourishing it, it increases its sensitivity and vibration speed, being this one responsible for the “annihilation”, beyond this limit it would saturate.*
- *The greater the rotation speed (pulse width), the greater the energy flow that would be entering and stimulating our EMF. “Visually” you would see in this condition how the vortexes would stretch.*
- *A person may be unbalanced due to greater or less energy, you must always work from the balance.*
- *The modification of the amplitude (v.) does not significantly modify the result. The voltage is directly proportional to the distance between the user and the antennas of the equipment.*
- *For each volt, a useful stimulus would be generated covering a scope of 15cm. This number is an “estimation”, because the more sensible the being is, the less amplitude or the greater the distance between the person and the equipment. This “estimation” applies to beings with balanced EMFs.*

- *In the vegetal and animal sphere the electromagnetic principle is the same, although the mathematical values differ...*

Let us use a more electronic language...

- *If micro comptrollers and crystals are used of 20Mhz., the necessary frequencies, the form and pulse width shall be generated to reach that “package of frequencies”, covering the mathematics herein described and given as a gift for **AIDS**...*
- *Figure 3: Let us see the pulse or form of the signal. For this over stimulus that is necessary “to eliminate the viral charge of ...”, it is very important to respect the form of the signal. This must be in the shape of a “needle” with a rounded point, or to put in other words, as a digital signal of a small pulse width with a rounded point, without the angles or upper edges. When they are not rounded, the person would not feel at ease (as an electric stimulus) and the nervous system would not be able to relax (in practice, it would be quite irritating)... How can we round them?... At the exit of the micro comptrollers (or microprocessors) we must place a resistance in a series of 1k (1000 ohm), from there directly to the antenna with a short track or cable, protected with a mesh to ground. Therefore it shall have a signal of 5v. of exit with its 1, (binary expression of ones and zeros) or rounded peak.*

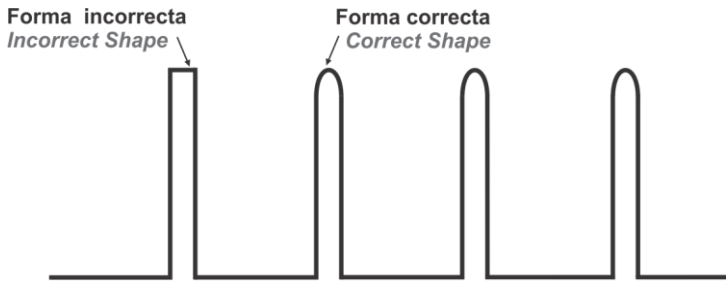

Fig. 3

- *At the exit of the micro comptrollers this resistance of 1k. is placed, from there to the antennas. For such antennas slightly steely wire was used (so that they can easily bend and change their form), as the contacts (legs) of some capacitors with farad peaks, with approximately 0.4mm of diameter. These legs would be 4 to 5mm long, with the addition if the point as a needle so that it works as: “crown effect” (cut with electronic pliers in a clear diagonal way).*
- *Through the end of these antennas, with an exit of 5v., a bubble shall be generated of approximately 80cm of useful stimulus. These shall be pointed toward the person at an ideal distance of 50cm. At shorter distances, including 1 cm. (antennas – biology) they would saturate the EMF.*
- *The equipment can be used at 1 cm for very specific cases where the application would be “local” accelerating the metabolism a lot and biology in itself in this given point, or using it in a “general” form 50cm., in the way described so far.*

- *Where and when to use an equipment?... Under the bed to the waist, at the time we go to sleep...*
- *The mattresses technology does not modify the results.*
- *The worst place to locate the equipment under the bed, would be under the pillow because the brain, when receiving an extra stimulus, would unload through dreams... As a result, the person would have dreams one after the other, therefore the ideal place is under the bed and at the waist.*
- *Why under the bed?... I asked myself, where does a person spend many hours and keeps still without modifying his life style? “in bed and while sleeping”. Following my belief that “whatever a human being invents must be practical and functional”, I modified electronics following our life style. On the basis of this conviction it took me 10 years to find “the biology saturation point”... That is, when increasing the stimulus, the EMF that surrounds us would saturate after a few days and there would be no exchange through resonance, where seeking protection, it would “close” and if the electromagnetic stimulus issued by the equipment is lower than necessary it would not be enough to attain the results in time and form.*
- *Lastly, there exists a specific order, that is the “tuning” of a signal...So, like in a car: first the distribution chain of a car and then the going forward... No expert would do otherwise... Some aspects to synchronize in alphabetical order are: Amplitude, pulse width, antenna, influence distance, pulse form, frequency, octave, time of exposure to the stimulus, values, etc...*

How have I reached these results? “Using my body as an instrument” ...

An example very few people know: The sealing of the “channels” and all its “vortexes”, the product of the electromagnetic waste or denser vibration states, does not allow the energetic circulation or the necessary flow to generate: “life”, “happiness”... The sealing generates “panic” ...

If the “channels” of a car or flow ducts for the fuel, oil, water, hydraulic, air and vacuum, brake fluid, etc... and also the filters, (“vortexes”) or air, gas takes, etc., were blocked with waste, this car will not work.

Solution: You must stimulate your EMF, liberating and restoring the “normal flow”, again allowing yourself to feel “life”, “happiness”... Freeing yourself from “panic” ...

Let us continue...

Figure 4: The “thickness” of the Chakra wall or the electromagnetic swirl wall, determines the strengthening of the lack of balance or the change of the quality of your work.

Normally this has the thickness of a sheet of paper of a normal size, (70 grs.). Using the suitable equipment regularly, after some years, you would succeed to increase your wall a millimeter or more, attaining a great resistance to the lack of balance.

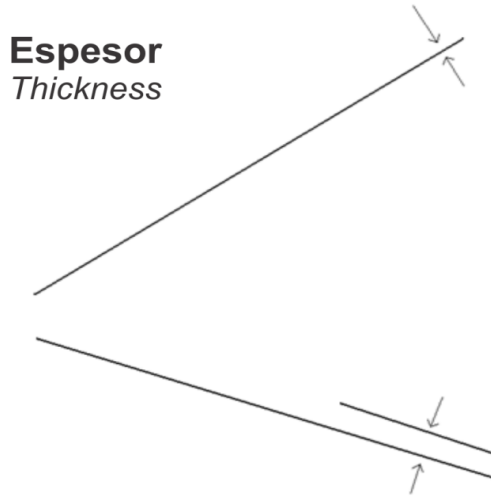

Fig. 4

Figure 5: Another example very few people know. It takes place when the upper external lips of these whirls are re oriented inwards, blocking the correct “breathing” (I use this word since I do not find a better one that describes it), this would generate “oppression” which might cause a stroke. You feel as if you had an elephant’s foot on your chest... Using this “science”, this feeling would revert in approximately 120 seconds...

Opresión
Oppression

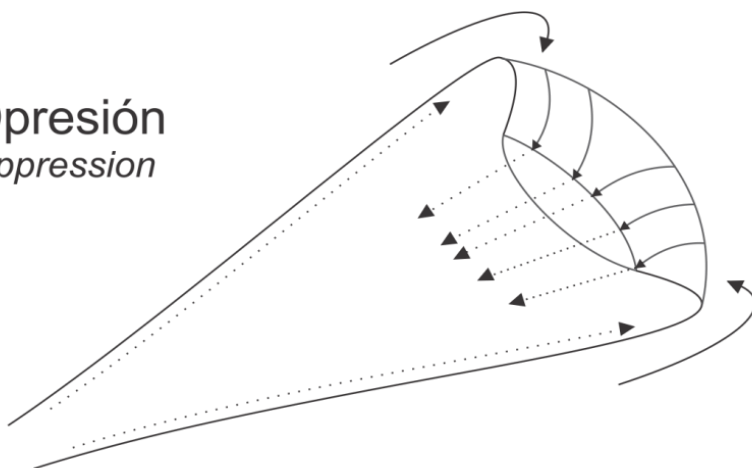

Fig. 5

The “sense of rotation” determines electromagnetic nutrition or malnutrition. Only 20 minutes in the opposite direction would be enough to undernourish us, taking us to a sense of exhaustion.

Two last personal stories...

- *On another opportunity, I assembled frequencies together with many of their harmonics, of three specific chakras of our EMF electromagnetic compatibility (EMC) and I amplified them. The form of emission is “electric”, that is, the antennas touching my skin.*

Result: After sleeping for about 40 minutes, I had a sensation of “gigantism”...

With the EMF extremely expanded, when I tried to pass through a door, I felt that I could not go through it as I always do, and I went through it sideways. This feeling lasted only a few seconds 30 seconds... One of the most beautiful sensations...

- *In the year 2000, a surgeon, let us call him Mario, (born in the city of Olavarría, Province of Buenos Aires, Argentina), of around 70 years of age, with more than 40 years in the practice of the profession and with knowledge of this new science, contacted me to solve a problem he had on one of his knees... A month later, he described his experience which he summed up in three specific points:*

1º- “Symptomatology”, while tilting his head as if expressing doubt, he said: “well”, I can understand, since there already exist electronic equipment’s that limit the symptoms...

2º- “Anesthesiology”, he kept tilting his head while he said: “well”, the electronic anesthesia has already been invented...

3º- “But”... he said: what I definitely cannot understand is the “alertness” I experience these days...

The answer Mario was given was simple: that alertness is the result of a good recovery of blood circulation and improvement of its oxygenation...

Notice that through the transparency of the hands nails, you can have a superficial idea of the quality of the blood and its oxygenation level...

“Elderly” people normally have white or grey nails due to the scarce level of oxygen in blood... And therefore we can see how beneficial the treatment has been...

This system does not replace other medicines, it is just another strategy... A complement...

In the year 2011, the Director of the “Escuela Argentina de Inventores de la República Argentina” (Argentine School of Inventors of the Argentine Republic”, carried out a background study and it was found out that there is NOTHING similar in the world...

Use approved by the Department of Health and Social Security of the Argentine Republic” year 1995. Approval Number: 2002-14080/95-5...

*At the end of the book see **annex** of the Report of the “Universidad del Comahue” with the use of the “**Rebion**” system...*

The correct electromagnetic stimulation is applicable in diverse examples with excellent results in some cases:

- *Cramps.*
- *Nervous system.*
- *Depression - Insomnia.*
- *Blood circulation.*
- *Blood oxygenation.*
- *Elevation of metabolism.*
- *It nourishes and fights diseases.*
- *Renal failure, before dialysis.*
- *Blood clots absorption in the brain.*
- *Annihilation of most viruses.*
- *It increases the performance level, through vitality.*
- *Amplification of natural biological defenses.*
- *Removal of all the side effects of chemotherapy.*
- *Management and control of the “movement of liquids in plants”.*
- *Control of stress and micro tears in high performance animals, racehorses, etc.*
- *The electromagnetic working principle is also the same in animals, fish and plants.*

Referential times:

Clarification: Doctors always have suggested to me “not to give dates and times”, which is an opinion that I share, given that the response from a human being to another varies, but I also understand that most people need to know “referential times”, whereby I clarify: Do NOT take these figures as precise as they are only indicative...

- *Cramp end in 48 hours...*
- *People suffering from depression: First progresses from 48 to 72 hours...*
- *Gastrointestinal system normalizes, in most cases, between 7 to 10 days...*
- *Alcoholism, abusive people who cannot overcome such situation: 30 days...*
- *Skin renewal, smoothness and texture: 60 days.*
- *Brain blood clots: 60 days...*
- *Physical resistance to fatigue in people who are older than 70 years old: Approximately 60 days...*
- *Etcetera...*

Would you like to stay vital in time?

With these mathematics the first electronic equipment in the world that wakes, energizes and develops chakras has been built.

The universe, the existence “is pure technology” (electromagnetically), where the most complex works in the simplest way...

The mechanism is very complex but the performance principle is simple and perfect...

“Love is a polyharmony in its infinite pureness”...

Over the years, I find new variables and performance principles, leading me to observe how far away I am to “understanding everything”, which awakes in me a deep admiration and fascination. This inspires me to continue in the “search” for this “understanding” ...

BENEFITS OF THIS NEW TECHNOLOGY:

- *Continuity of crops under low temperature conditions (for example, page 122, flowers at the: “El Valle” Neuquén, Argentina).*
- *Crop stimulation in the correct way. This will result in a more extensive “spring” and thus you can take advantage of, for example, late rains.*
- *An Increase in food production and a decrease in food production times of, for example, salmon in cages, with the knowledge that a 0.5% increase and/or a decrease in times, would mean millions of dollars for the producers.*
- *The application of this new knowledge, starting with AIDS virus removal, being pioneers in this understanding.*
- *It can also be used in specialized rehabilitation centers for people of different ages (both children elderly people) to solve problems of insomnia, depression, lack of willingness, brain clots, metabolic, circulatory and nervous systems. It increases vitality, longevity, the callosity of difficult bones such as hips. It improves health in general.*
- *Control and/or removal of emotional unbalances, correcting failures: labor, family and personal failures. Imagine a world in which most of its inhabitants have the willingness and motivation to “do” things.*
- *In short, you can obtain what is called “quality of life”...*

SUMMARY OF BASIC HIV FORMULA:

AIDS Formula:

Frequencies: (.....).

*Pulse width (**useg**) type of needle with a rounded top.*

1 antenna per frequency pointing to the patient.

From 2 to 4 daily hours between 2 and 6 months during sleep.

Distance between the equipment and the individual, from 45 to 50 cm.

Applicable in the near future.

- ***Mobile phones:***

*These mathematics will be introduced in mobile phones, which will be the first to Access to a “Rebion” application, where the mobile pone will interact with its owner in various functions: sleep, pain, metabolism acceleration, emotional stability, **AIDS**, etc.*

- ***Health portals:***

Electromagnetic vibrations at the entrance of cities.

The electromagnetic field generator health portals will be disposed at the entrance of cities to rebalance its visitors. The portals will generate a polyharmony that will offer an ideal vibratory state for the metropolises...

As a “basis”, the electromagnetic operation principle is the same for all people...

- ***Journeys:***

Each sector of the universe has its own vibratory state.

In the future, when this vibratory state is understood and controlled, it will be the method to travel to any part of the universe. A specific and very powerful electromagnetic signal will be generated in a space vehicle and this will be “located” in the corresponding previously mapped sector.

We would be “placed” according to “correspondence” and “sympathy”...

We would not travel as we do now. The word “travel” would have a new meaning and it would only take minutes...

EXPERIENCES: *The purpose of the following experiences, in a correlative way, is to indicate the wide range of applications.*

Fish...

- *Years ago, a clinical laboratory related to salmon nets in Chile, learning about the discovery of metabolism acceleration, consulted if it was feasible to increase salmon production in a 0.5%... And the answer was “yes”...*

Months later, I was in the facilities of the “Universidad Nacional del Comahue” in Bariloche, Argentina, with 87 thousand fish carrying out the studies...

Objective: To surpass the 0.5%... As a result, we achieved the 20%...

*Due to different issues (an earthquake in Temuco, for example), I was not able to submit the report to the salmon producers in Chile... This still **pending**...*

*At the end of the book, see the **annex** of the report of the “Universidad Nacional del Comahue (salmonids).*

Plants.

- *Once, 200 carrot seeds and 200 lettuce were planted in two seedbeds. One of them was stimulated with Rebio using a transducer (a transmitter with multiple antennas). The antennas – seeds distance was 2cm. The other was used as a reference.*

Result: There was only a difference of 6% between them in favor of Rebion equipment.

Conclusion: As long as the life of the seedling itself depends on the nutrients and information of its own seed, exterior electromagnetic stimulation will achieve little benefit.

When the seedlings exceeded, in this example, 5 cm high and started to nurture from their surrounding environment (water, soil, temperature, light, electromagnetic field), the differences “did” increase...

- *Another example: It was noted that a 10 cm high tomato seedling in a little waterproof plant pot showed changes occasionally when being stimulated.*

When all the plants were submitted to “shortage of water”, enough water was added to “flood” the soil of this little plant pot, flooding it with 1 cm of water on the surface. A transducer was also used, stimulating it for 4 continuous hours only once.

Result: The seedling had all its leaves pointing towards the sky and the trunk was totally erect and straight... When stimulation finished, after 30 minutes, the seedling returned to its original stunted form.

Remark: *By applying “liquids movement control in plants” (with its electromagnetic formula), crop strengthening can be obtained with the additional benefit of flooded soil recovery...*

- *There is another experience with 20 cm high tomato seedlings planted in the soil, in the open air. In this opportunity, stimulation by electric current was used (a cable from the equipment, in direct contact with the biology of the seedlings),*

spinning six of them around their trunks, and stimulating them during 72 continuous hours. The remaining 19 were taken as a reference group, a total of 25 seedlings.

After some time, the equipment was disconnected and at first sight, there were no differences between both groups.

After the first freeze, the seedlings previously stimulated “survived”. The remaining 19 laid down with a brown-colored gelatinous appearance, showing a burnt biology due to the low temperature ...

Step-to-step description: After the first freeze, these six seedlings had half of each leaf of a brown color, but not so gelatinous.

Night after night, freeze after freeze, their leaves started withering while their branches and trunks were still green. From a visual observation, they were “healthy” ... Then, they did not have branches and afterwards they lost half of their trunks until they inevitably ended like the previous 19... They held on until the sixth freeze...

Conclusion: High strengthening showed in adverse weather conditions...

Recovery of exotic plants: (2 anecdotes)...

Yellow Cypress. Year 1996. Mr. Luis Yamada.

• *1º... In 1996, I happened to meet Mr. Luis Yamada's. That gentleman of Japanese origin living in Buenos Aires, seemed to be about 70 years old, (I hope not to be wrong). He is the designer and author of the famous "jardín japonés" (Japanese garden) at Palermo (Federal Capital). Director and founder of the first Argentine school of landscaping. This data is just a reference to demonstrate that Mr. Luis Yamada (at that time), was a widely experienced person...*

The story runs like this:

I "defied" the man and suggested an experiment. I asked him to bring me a plant that was still alive but with very poor prospects of survival and which would in theory "die" soon... Imagine the look he casted to this 31-year-old young man... However, he agreed and he said that he had a "Yellow Cypress", and that there are "two" mortality factors for this small basket tree of 1.60m high:

a: "cat urine".

b: "air in the roots", if the root ball broke.

In this case "b" was the mortality factor involved. The Cypress was in a balcony (29th floor), where the wind had broken the root ball... When I received it, all its leaves (spikes) were dry, beige-colored and when I touched them, they were falling, he broke a twig near its canopy and it did not come apart. The man told me that it was alive, but still the case was hopeless. I lifted it and took it home. I made a hole in the garden, previously placing a little transducer with a cable

connected to the Rebion equipment inside the house. It was stimulated 24 hours during two weeks... And what happened then?...

15 days later, the yellow Cypress did not have leaves, but its entire 5cm base diameter trunk and its branches were light green and, at the touch, velvety, as the intern bark of an Eucalyptus. I phoned Mr. Luis Yamada and I told him: "it's OK"... This was in winter. In spring, it was showing a beautiful green-yellow color in all its foliage, and there it is, it is still growing...

Araucarias. Year 2005.

- *2º... In 2005 a young lady, a landscape expert from Villa La Angostura (Neuquén-Argentina), who worked for an important firm, contacted me and asked me if I could travel to the Barrancas de Martínez in Buenos Aires in order to stimulate and recover some Araucarias which were drying out, at a well-known businessman's house, and she told me that the gardener of the same and his specialist staff did not know how to reverse the process. As some complementary information I must say that this gardener had also worked for an Argentine president and other well-known businessmen...*

So I went to Buenos Aires and found many Araucarias of 25 to 30m high, with 45cm diameter trunks at the base, the bark had detached from many of them, and they had the appearance of "dry trees". This indicated that most of them were standing dead. I stimulated four of them, which were the better looking ones, with Rebion 24 hours during nine days. I previously explained to these people that there would be no changes

during the first 5 days because there was mild weather and that was the time needed for the sap to rise (in the mountain, in winter, with constant snow, it would take a minimum of six days to rise). On the ninth day, their spike-shaped leaves grew from 9 to 12mm...

What was the result?... A new biology (fluorescent light green) and their branches exploded in little sprouts of 1mm each, to about 40cm away from each other...

Back at Bariloche, having disconnected the equipment, I reported the biologists of the “Universidad Nacional del Comahue” about the results of the experience, and when describing the scaled condition of the Araucarias, I was instructed that it was the “giant” specimen and that the normal growth of their leaves is about 1mm. average per year...

Next...

- In winter, trees that are 40m high with trunks of 50cm. diameter at the base and constant snow, at -10°C at night, would need six days of electromagnetic stimulation (antennas in contact with the tree), 24 hours a day to make their sap rise, stimulating these continuously during 15 days...*

Result: 25mm of new biology, fluorescent light green, as in spring, but in “winter”...

- These specific signs (frequencies package), are responsible for circulating of the sap. The fruit producers of the El Valle - Neuquén – Argentina, learned about these findings.*

They exploit 80,000 hectares of fruit trees, from 400 to 500 trees per hectare and were interested in the case. So I was asked if it was possible to add extra 1.5°C of cold tolerance, being -1.5°C the normal temperature that a flower can bear, that is, to take the flowers to a total tolerance of -3°C...

I answered “Yes” and they asked me “How?”...

I explained to them that if we kept our hand many hours in the snow, as a result our nails would fall. The cold would impair blood circulation and when the nails do not receive oxygenated blood, they would detach, dead. However, in this example, if could restore blood circulation, the nails, would “not” be damaged...

With the flowers of the trees, the same happens. Cold inhibits sap circulation and it becomes insufficient, and it is the cause of flower deterioration. When preserving the circulation despite the cold, the flower would resist, but no with -30°C during 3 continuous hours because its molecules would crystallize, breaking up their structure, but it “would” tolerate -3°C...

The problem at that moment was the “application method”. It was by electrical means, about ten trees per equipment interconnected by cables... Imagine the tractor circulating and disconnecting them...

I was worried and I designed a functional and practical method. A wireless equipment driven by remote control and a battery would be fixed in the center of each hectare, like a stake, and its electronics would generate the necessary frequencies package with a special antenna. It is simple... An equipment per hectare...

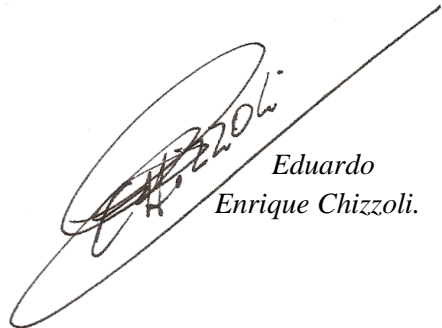

*Due to personal reasons, I could never return to “El Valle”.
Still **Pending**...*

- *Insects: There was not the opportunity to apply it on a large scale, for example in plagues, locusts or other species which finish off entire plantations in certain places...*

*I found out the vibratory states by which “nature” nurtures
electromagnetically “biological” nature itself...*

*When strengthening this signal, the expected results are
obtained. This is a subtle form of “spring” by which we obtain
a short-term biological growth and/or a huge strengthening to
fight adverse weather conditions.*

THANK YOU.

Eduardo
Enrique Chizzoli.

ANNEX

REPORT OF THE “UNIVERSIDAD NACIONAL DEL COMAHUE” (NATIONAL UNIVERSITY OF THE COMAHUE)

CENTRO DE SALMONICULTURA BARILOCHE
UNIVERSIDAD NACIONAL DEL COMAHUE
CENTRO ESPECIALIZADO EN LA CRÍA DE SALMONIDOS

[Informe experiencia trucha arco iris](#)

Evaluation of the application of electromagnetic stimulation to improve the growth of the rainbow trout juveniles under intensive breeding conditions.

Báez, Víctor H.¹,

1. Director of Intensive Production Sector CSB.

Department of Exploitation of Aquatic Resources – “Centro Regional Universitario Bariloche” – “Universidad Nacional del Comahue”.

The purpose of this report is to submit the preliminary results obtained from the experiences requested by Eduardo E. Chizzoli and Nicolás A. Bianchi, to evaluate the effect of electromagnetic stimulation, which is produced from the use of the Rebion® equipment developed by E. E. Chizzoli, on the

growth of hatchery *Oncorhynchus mykiss* (rainbow trout) juveniles.

The experience lasted 90 days, from September 15th, 2009 to December 14th, 2009 and it was done in facilities of the Salmon Farming Center of the “Universidad Nacional del Comahue” and supervised by the staff of the Department of Exploitation of Aquatic Resources.

Hatchery *O. mykiss* juveniles of average initial weight of 0.16 g. were used. They had overcome the first feeding stage and the characteristic mortalities of this stage, thus being in active feeding.

Taking into account that the effect of the treatment in intensive breeding conditions was under evaluation, it was decided to have an initial number of 87,764 fish, divided in two lots identified under the heading “with and without treatment” with a replica per treatment, disposed in turn in two double purpose incubation pans of 200 liters of water volume, with a flow of 23 liters per minute each. In this way, each pan had a number of about 21800 specimens.

During the experience, the lots were fed with a starter national food commercialized by the Fundus company, starting the feeding with a particle size of 0.4 mm, which was later changed to 0.7 mm. The ration of each lot was fixed from the feeding rate drawn from the indicative chart supplied by the manufacturer, taking into account the average weight of the specimens and of

the average water temperature. During the test period, the range of water temperature values was between 6.1-11,33°C with an average of 8.3°C \pm 1.05.

Eduardo E. Chizzoli was in charge of the application of the treatment from the use of the Rebion® equipment for the emission of low frequency packs with an amplitude lower than 4 volts, by means of electrically isolated antennas placed in the pans selected for treatment. The Rebion® equipment has been tested by the Radio-Physics Department of the Department of Health and Social Action of the Argentine Republic (Approval No 14080-95) determining the safety of its use for the human being.

During the development of the experience, the weight values of the specimens were registered. They were carried out from

CENTRO DE SALMONICULTURA BARILOCHE
UNIVERSIDAD NACIONAL DEL COMAHUE
CENTRO ESPECIALIZADO EN LA CRÍA DE SALMONIDOS

[Informe experiencia trucha arco iris](#)

samplings of sublots as they are organisms of low average individual weight. Besides, the temperature and daily mortality were registered, as well as every particular observation about the lots under experimentation.

Results Obtained

1. Biological Test.

a. Weight growth.

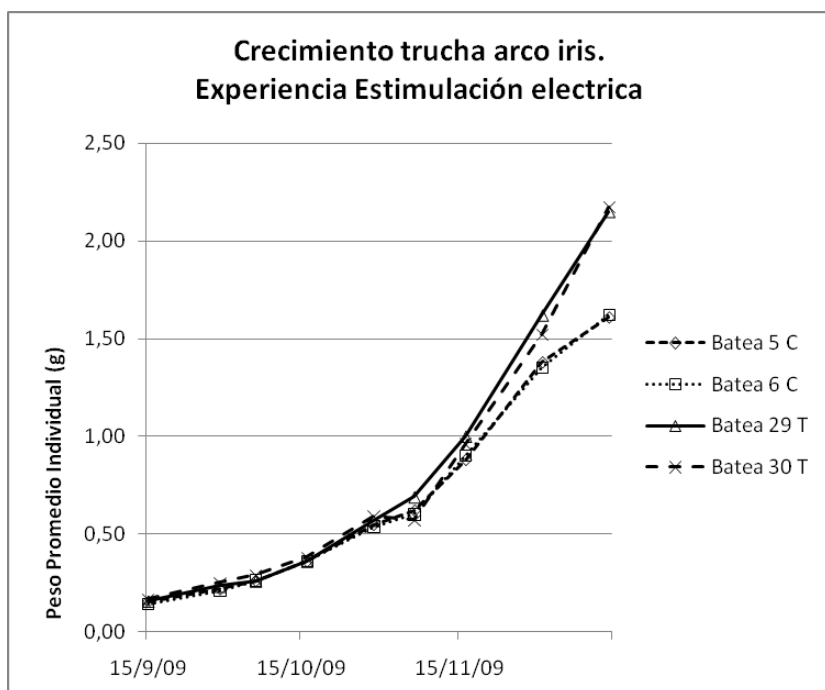

Figure 1: Individual (average) weight of the specimens of control (C) lot and treatment (T) lot.

b. Specific Daily Growth Rate.

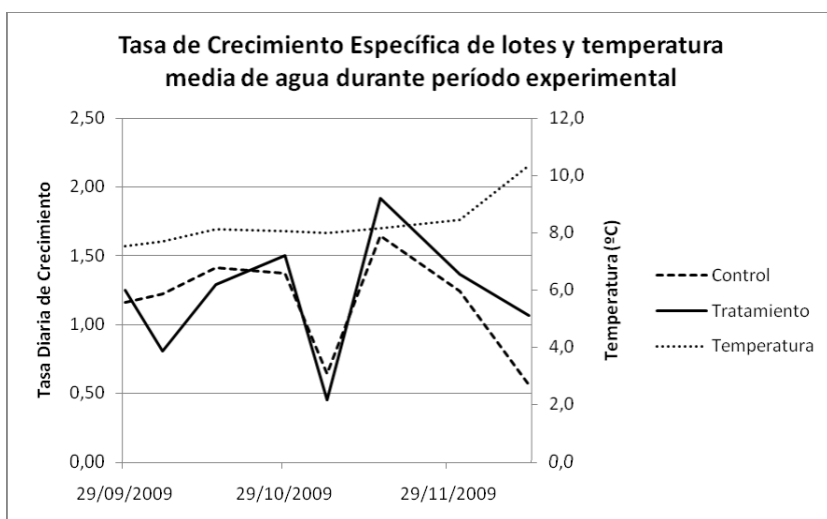

Figure 2: Specific daily growth rate obtained in control lot (cut line), treated lot (full line) and average temperature during the test period (dotted line).

C. Weight difference - Control lot vs. treated lot.

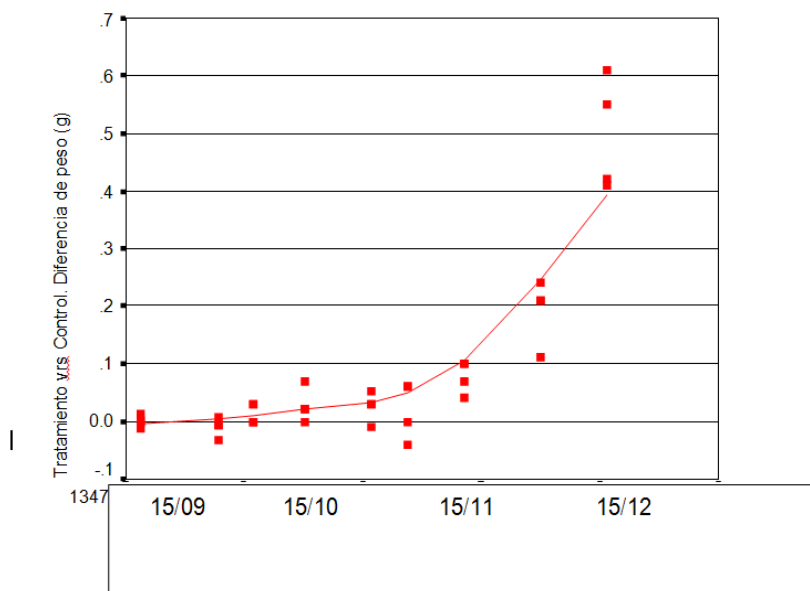

Figura 3: Diferencia de peso (g) observada entre Tratamiento y Control.

DD/MM/YY

Figure 3: Weight difference (g) observed between Treatment and Control.

Final comments.

1. The experimental lots did not show mortalities that could be attributed to the treatment carried out. The registered values correspond with the normal ones obtained during this breeding stage.
2. During the test, treatment lots were affected by Hexamitosis, whose causal agent is the intestinal parasite Hexamita sp. The mortality during the same was light. Given that the control lots were not affected by the same sprout, the effect that could have been produced by the treatment carried out, cannot be concluded.
3. During the experimental period, the weight growth curves that are in Figure 1 were obtained. The same were built for the control lots and the most stable pans treated. This decision was made taking into account that there were differences as regards the treatment established in the rest of the lots. In figure 1 the treatment lots show a higher growth than the control lots.
4. Having obtained the specific growth rate, in figure

2 superior values can be observed in treatment lots, mainly as from the second half of the experimental period. Nevertheless, two decrease points can be observed in the growth rates, the reason of the same could not be identified. However, it can be concluded that regardless of the reason that has caused this decrease, it affected equally all the lots in test. In the same figure, there are two temperature values registered during the period, which showed a sustained increase, without variations that could modify the growth of the specimens.

5. Having analyzed the weight growth differences obtained (figure 3), it can be observed that the treated lots show significant differences, which could be identified at a date close to the first 30 days of treatment (ANOVA, $F=48.687$; $P>0.001$).

Conclusion

From the results obtained in the different tests carried out and the analysis of the same, it can be concluded that the lots submitted to the treatment evaluated show statistically significant differences, the weight growths being higher in the treated lots.

These results are preliminary and enable the carrying-out of new tests to verify the tendency found in specimens of a higher size. Likewise and taking into account the effect of the use of electromagnetic fields manipulation, specially in aspects referred to piezoelectric effect in bone tissue, it is essential to carry out more extensive tests in bigger fish to evaluate weight increase distribution, in order to discard that such effect may be due to an increase in bone density.
