

Dave Case, Electronic Engineer, Invents an Electronic Counter-Measure for High-Frequency Ringing in Ears or Tinnitus

Posted on [November 10, 2016](#) | [20 Comments](#)

Image: [The Emerge Center](#)

by Ramola D/Posted 11/9/2016

Dave Case, an Electronics Engineer and inventor, recently disclosed [on a call-in talk show](#) for those Americans and others worldwide being covertly targeted and assaulted with directed-energy weapons (DEWs) and neuro-monitoring technologies—in fact the same one featuring interviews by Ella Felder with well-known NSA whistleblowers William Binney and Kirk Wiebe [covered here earlier](#)—that he had developed an electronic countermeasure to combat tinnitus, or high-frequency ringing in ears that many people experience today.

What is Tinnitus?

According to the [Mayo Clinic website](#), “Tinnitus (TIN-ih-tus) is the perception of noise or ringing in the ears. A common problem, tinnitus affects about 1 in 5 people. Tinnitus isn’t a condition itself — it’s a symptom of an underlying condition, such as age-related hearing loss, ear injury or a circulatory system disorder.”

Information on numbers from [hear.it.org](#) tells us: “According to ATA, the American Tinnitus Association, 45 million Americans are struggling with tinnitus. In Germany the “Deutsche Tinnitus-Liga” estimates that 19 million Germans have experienced tinnitus, and that 2.7 million Germans have persistent tinnitus, of which 1 million have very severe tinnitus. The British Tinnitus Association estimates that 10% of the UK population suffers from tinnitus.”

Coping strategies or anti-depressants offer relief, according to information at health websites.

Tinnitus as High-Frequency Technology Used in Covert Assault

But there are other aspects to tinnitus few outside the military and Intelligence world know about.

In this twenty-first century of Electronic Warfare (Operation, Testing, and Training), those who are being assaulted by DEWs in particular (in illegal, criminal, covert systems of surveillance and harassment being kept concealed by the global Surveillance State in collusion with mainstream media, co-opted psychiatry, and silenced communities) know that the tinnitus they have suddenly begun to experience is an *externally-induced* rather than natural or inherently-arising

physical health condition, so this news of a countermeasure has evoked much interest.

Many who are being thus technologically assaulted report either a continuous high-pitched frequency or being woken continually at night at specific intervals by such high-pitched sounds or ringing.

Dave himself has experienced this tinnitus, and relays that his experience began after he tried to patent a certain invention of his, involving the use of photonic processes in computers, and found that the NSA already had a patent for this light technology, classified Top Secret. He believes that he began to be externally targeted with sophisticated remote electronic technology, and, in his own current analysis of these EMF (Electro Magnetic Field) or scalar signal assaults on human bodies, says the GPS satellite system is the primary system being used for neural information transmission to and from human targets.

Signals Intelligence, Radiation Intelligence, the NSA, Neuro-Surveillance, and Targeted Individuals

Mr. Case points to the information on Signals Intelligence now known worldwide contained in the lawsuit against the NSA filed by ex-NSA employee, John St. Clair Akwei (excerpted in parts below, from scanned graphics of a 2009 publication in MindNet Journal), which points to advances in neuro-technology, radar, satellite technology, and bio-surveillance that is still carefully being kept out of the corporate press and concealed under labels of classification and secrecy, while being secretly legitimized for use by the Department of Justice, as uncovered by researchers such as Dr. Nick Begich, and explored here earlier.

Signals Intelligence (SIGINT)

The Signals Intelligence mission of the NSA has evolved into a program of decoding EMF waves in the environment for wirelessly tapping into computers and tracking persons with the electrical currents in their bodies. Signals Intelligence is based on the fact that everything in the environment with an electric current in it has magnetic flux around it which gives off EMF waves. The NSA/DoD (Department of Defense) has developed proprietary advanced digital equipment which can remotely analyze all objects whether manmade or organic, that have electrical activity.

Excerpt/John St.Clair Akwei vs. NSA, Fort Meade, MD

According to this information, the NSA is perfectly aware that all human brains give off brain waves which can be picked up, every human brain has a unique brain resonance signature, and, under the right conditions, all human brains can be covertly surveilled, monitored, entrained, and modified *remotely*.

Detecting EMF Fields in Humans for Surveillance

A subject's bioelectric field can be remotely detected, so subjects can be monitored anywhere they are. With special EMF equipment NSA cryptologists can remotely read evoked potentials (from EEGs). These can be decoded into a person's brain-states and thoughts. The subject is then perfectly monitored from a distance.

NSA personnel can dial up any individual in the country on the Signals Intelligence EMF scanning network and the NSA's computers will then pinpoint and track that person 24 hours a day. The NSA can pick out and track anyone in the US.

3. NSA SIGNALS INTELLIGENCE USE OF EMF BRAIN STIMULATION

NSA Signals Intelligence uses EMF Brain Stimulation for Remote Neural Monitoring (RNM) and Electronic Brain Link (EBL). EMF Brain Stimulation has been in development since the MKULTRA program of the early 1950s, which included neurological research into radiation (non-ionizing EMF) and bioelectric research and development. The resulting secret technology is categorized at the National Archives as "Radiation Intelligence," defined as "information from unintentionally emanated electromagnetic waves in the environment, not including radioactivity or nuclear detonation."

Signals Intelligence implemented and kept this technology secret in the same manner as other electronic warfare programs of the US government. The NSA monitors available information about this technology and withholds scientific research from the public. There are also international intelligence agreements to keep this

Excerpt/John St. Clair Akwei vs. NSA, Fort Meade, MD

From this lawsuit and other sources, we learn that mind-reading is no longer fiction, mind control is no longer a myth, mind and behavior modification continue to be an active fixation with the CIA (with its grisly history of MK ULTRA experiments), and, under the broad umbrella of Neuro-Surveillance, the NSA—and DARPA, and the CIA and the FBI, and possibly the DHS and the TSA and the DEA too—is most definitely engaging in it.

technology secret.

The NSA has proprietary electronic equipment that analyzes electrical activity in humans from a distance. NSA computer-generated brain mapping can continuously monitor all of the electrical activity in the brain continuously. The NSA records and decodes individual brain maps (of hundreds of thousands of persons) for national security purposes. EMF Brain Stimulation is also secretly used by the military for brain-to-computer link (in military fighter aircraft, for example).

For electronic surveillance purposes, electrical activity in the speech center of the brain can be translated into the subject's verbal thoughts. RNM can send encoded signals to the brain's auditory cortex, thus allowing audio communications direct to the brain (bypassing the ears). NSA operatives can use this covertly to debilitate subjects by simulating auditory hallucinations characteristic of paranoid schizophrenia. Without any contact with the subject, Remote Neural Monitoring can map out electrical activity from the visual cortex of a subject's brain and show images from the subject's brain on a video monitor. NSA operatives see what the surveillance subject's eyes are seeing. Visual memory can also be seen. RNM can send images direct to the visual cortex, bypassing the eyes and optic nerves. NSA operatives can use this surreptitiously to put images into a surveillance subject's brain while they are in REM sleep for brain-programming purposes.

Capabilities of NSA Operatives Using RNM

There has been a Signals Intelligence network in the US since the 1940s. The NSA, Ft Meade has in place a vast two-way wireless RNM system which is used to track subjects and non-invasively monitor audiovisual information in their brains. This is all done with no physical contact with the subject. RNM is the ultimate method of surveillance and domestic intelligence. Speech, 3D sound and subliminal audio can be sent to the auditory cortex of the subject's brain (bypassing the ears), and images can be sent into the visual cortex. RNM can alter a subject's perceptions, moods and motor control.

Speech cortex/auditory cortex link has become the ultimate communications system for the intelligence community. RNM allows for a complete audiovisual brain-to-brain link or brain-to-computer link.

4. NATIONAL SECURITY AGENCY SIGNALS INTELLIGENCE ELECTRONIC BRAIN-LINK TECHNOLOGY

NSA SIGINT can remotely detect, identify and monitor a person's bioelectric fields.

Excerpt/John St. Clair Akwei vs. NSA, Fort Meade, MD

Herein lies the secret of neuro-targeting and the entire phenomenon of Targeted Individuals (TIs), desperate attempts to conceal which and whom continue apace—although, thanks to the commitment today of mind control and TI activists, ethical scientists and whistleblowers, podcasters, and writers worldwide, awareness of these advances in neuro-technology as well as of the whole unsavory phenomenon of non-consensual human experimentation continues to surface and spread.

The Bio-Relevant Feedback Loop

Image/Omnisense.org

Targeting humans with remote electromagnetic or scalar wave technologies apparently requires a lot of specific detail. In order to target a human body remotely, Mr. Case says, a great deal of data is picked up first, related to body temperature, brain resonance frequencies, the skin dielectric, and so on. High-frequency signals sent to targets, and modulated specifically for each target, rely on something called a bio-relevant feedback loop which relays physiological data from the target back to the supercomputer running the system.

When the modulated high-energy signals are directed at the target, he suggests, the skin acts as a transducer, absorbing the high-energy signals and transforming these into audio signals which traverse the body and impact the brain, much in the modality of the Neurophone, an invention from 1958 by Patrick Flanagan which can send phase-modulated electrical signals via the skin into the nervous system to be reformed into audio signals by phase-cancellation in the brain, meaning the brain then hears sound—without the ear being involved.

This sound can range from high-frequency ringing or tinnitus to a clarity of music or voices, now being delivered remotely, without material apparatus. Readers—and in particular, psychiatrists, audiologists, otolaryngologists, neurologists—should note that this essentially means that voices in your head, music in your head, or a tinny ringing in your ears no longer means you have suddenly plunged into old age, a hearing breakdown, or that old, passé (and, many contend, false) psychiatric construct of “schizophrenia,” but that physical, electrical signals carrying audio waveforms could be deliberately being directed at your body—a phenomenon that perfectly sane “Targeted Individuals” who report harassment with voice-to-skull or “V2K” technology have long spoken about and are all too familiar with.

Countermeasure Disrupts the Bio-Relevant Feedback Loop

Dave's Solar Truck

Dave Case, who has been an inventor and engineer from a very young age, and has invented solar-powered engines and gadgets, including a solar truck that has run 3000 miles “without a

penny in fuel,” knew that the key to distorting the high-frequency signals being sent to his brain lay in disrupting the bio-relevant feedback loop.

To do this, he devised a method using an oscillator to create a similar but differently-phase-modulated sound to the tinnitus, so that the external signals could no longer activate the expected bio-feedback loops, given the distortions being introduced by the oscillator.

This distortive sound was recorded on a CD, and comprises the countermeasure that Dave offers today to all those being targeted. He cites 29 recipients who have offered testimonials to the efficacy of this device (some below).

Dave's Solar Polaris

Conversation with Dave Case

My recent conversation with Dave Case on this subject is below, as well as his contact information, below the interview.

Dave, you had mentioned, that as an Electronics Engineer, you have come up with a countermeasure for the tinnitus and induced sounds/ringing in ears that many “Targeted Individuals” experience. Can you first give us a sense of your background and experience and interests as an Electronics Engineer, so we understand your expertise in this subject?

I started learning Electronics at age 6. By my teens I had made my own chemistry set, boom box, electronic door lock, servo motor, and I was electro-plating coins, making hydrogen from water, etc. I got my degree in Electronic Engineering and began to invent things such as my magnetic levitator, and a photonic processor (light operated computer), and other projects.

I began to experiment in electronics at 6 years of age in times beach mo., and excelled quickly, self-taught until 19 when I got my degree in electronic Eng. At the age of 15 I had completed all of the following devises;

I made a door dead bolt lock from the servo of a remote control airplane and a broken calculator, if you pressed 3x9 on the key pad the bolt opened. My dad got angry that he did not have the code and kicked the door down.

I made my own chemistry set and was electro-plating quarters with copper, when buffed it looked like gold. I would go buy candy bars with them and memorize the cashiers reactions, they always put them in their pocket instead of putting them in the cash register. I didn't realize at the time but that was a social experiment.

I made a homemade boom box out of car speaker box, battery pack out of a portable phone, and part of a broken car stereo.

I was producing hydrogen, copper sulfate crystals, and many other things

I bugged the whole house by using small speakers as mics connected to a tape player that I cut the play head off and wired the mics to them, making an amplifier. When the guy renting the lower room found my bug he plugged the wires in the wall socket and that was the end of that.

At 20 I saw a vision of something I was trying to build for a long time, a magnetic levitator. I stayed up all night and built it from used tv parts for 6 dollars and it worked and levitated small pieces of metal.

I began to install c band satellite ant's for people, repair V.C.R.'s and tv's

In 1995 I had a vision of a light operated computer and began to try to patent it. My patent attorney said it was not just 1 invention but 5 and it would be 5 times the money while waiting to come up with the money I was attacked by an agency with very high technology. I have traced the attack to operation "clean sweep" (1997-1998) Dept of defence. This same dept was responsible for spraying the wepon of war fare "dioxins" on my home town when I was 5 years old. You can not find the town (times beach mo) on any map. It was demolished and they burned the soil even. You can look up times beach mo on Wikipedia and see the cover up story. It was no accident, but we were ginnea pigs.

You were recently on a call-in talk show where you mentioned that you discovered that your invention had already been patented—was it this exactly or something close? You also mentioned an NSA lawsuit—can we find this online, where can we find more information on this lawsuit, and what was the crux of it, why was the NSA interested in your invention?

Solar-powered UTV –

David Case of Van Buren arrived silently at The Current Local office Sept. 8 thanks to his solar-powered UTV. One of his many projects, Case says he completed the build over a four-week period by modifying an electric four-wheel-drive Polaris Ranger to be able to recharge its batteries from the sun.

Case estimates his driving range has increased from the factory rated 50 miles to nearly 70 miles, given that the UTV can charge its batteries while driving. He intends to add a power inverter to run electrical devices, including a chainsaw, from the battery banks.

"I hope to drive out to the woods, cut logs, load them in the Ranger, and then bring them home without using a single drop of gasoline," he says.

While trying to patent the photonic processor I was attacked by

an agency with extremely high technology, I got an electronic sounding tinnitus (pulse code modulation) in both ears debilitating me. I lost everything and could not make a living. I found out later that the NSA already has light-operating computers and it was classified top secret.

The NSA lawsuit in question was not mine. *(But the one filed by John St. Clair Akwei.)*

I knew that the electronics they were using (on me) could be stopped but how, so I began to make something that sounded just like the tinnitus to confuse their attack system. I built a new type of oscillator that made a similar sound and as soon as I put on the headphones and played the strange sound I was free. I have since cured over 34 people by sending this sound on CDs for free to any one with the artificial tinnitus .

Can you tell us a bit about the technology you think is being used, your understanding of how these sounds are being induced? Is this V2K or synthetic telepathy or the Frey effect? Are electromagnetic signals/ultrasonics being sent to people's ears, or auditory cortex, or is a cochlear implant involved?

In my opinion, the GPS satellite system is the main carrier for neural information transmission and my CD interferes with what is called a bio-relevant-feedback loop used to send bio-data to their super computers from the target, this feedback loop is vital to target a person.

Without the feedback loop, the system breaks down and the target is freed. I do think they are using constructive interference methods that cause large increases in power density at the target only, making it hard to detect with Hertzian type meters.

What kind of frequencies are we talking about? Can they be measured, and if so how? You mentioned the skin being used as a transducer. I understand transducers convert energy from one form to another. Can you explain this a bit more, including telling us what kind of transduction is involved?

energy hits the water in the skin, the modulation is transformed into audio and travels throughout the body. My CD vibrates the skin contaminating their signal and then real-time adjustments and timing are lost.

How did you yourself come to this subject? I understand you have experienced this auditory effect yourself.

I did not know before I was attacked that the NSA was testing these weapons of warfare on U.S. citizens. You just don't hear about it on the news.

I traced times and dates of when I was attacked and it led me to OPERATION "CLEAN SWEEP" 1997-1998.

(From a historical listing of Mind Control projects at a few sites online including [here](#), Operation Clean Sweep was a NSA/CIA operation experimenting with mass behavior modification that was run nationwide in the United States in 1997-98, aiming at "electromagnetic resonant induction and mass population control." Data on emotional wavelengths emanating from people was collected through helicopter probes following media events, and was re-broadcast in order to recreate event scenarios and re-stimulate population emotional levels. The re-broadcast was effected "possibly through GWEN network or cellular tower frequencies, co-ordinated from NBS in Colorado.")

You have mentioned testimonies from people who have used your CD. How should it be used, exactly, and can we hear a bit about what these people say?

The CD works best when played all night every night while sleeping on head phones that go to 24 khz. The most interesting thing is if we stop listening to the CD, the tinnitus will try to recover indicating this is an automated system we are knocking out every night. I think the GPS is a huge automated scan and track weapon (multi-function) guided by Artificial Intelligence.

Dave,
Wanted to write you
a letter letting you know
how much your CD has
helped me. Within the first
2 days of using it the high
pitch sound went away and
my attackers ability to give
me headaches and hurt my chest
with Remote Neural Manipulation.
I use the CD every day
when I have free time and
when I sleep. If my CD player
stops while I'm sleeping or
the batteries run out I will
wake up sore because my attackers
will start extracting me again
and attacking my nervous system.

Testimonial

I just wanted to write to you and tell you THANK YOU SO MUCH!!! I don't know exactly what you put into the cd or how it works, but I noticed I immediately felt physically better after listening to it one time and after a week I feel amazing!!! I have less fear/anxiety, less body aches, less fatigue, and I'm just feeling better in general and the community harassment part doesn't really phase me at all anymore.

Thank you so much for sharing your wisdom and knowledge with the t.i. community, it has been such a blessing and I thank God for you and what you have done for us. I'm thinking this would help ALL people not just t.i.s, but what a great thing for us. I hope you are doing good and God Bless You!!!

Testimonial

Hello Dave,

Just a quick note to say Thank-you for taking the time to develop a defense for a painful problem. My head pain, ear ringing felt like it was turned on by a switch in 2007. I had a surgery where I know I had something removed, miraculously, my ear ringing among other horrible symptoms were literally cut in half. Now I have 50% of what I used to have but its still horrific. Enough to keep me up all night.

I tried your CD's when I have to admit, I was unsure it would work, but after my first time all the way through my heart beat decreased. The high pitch noise in my head speeds up my heart and this can last for days. I have to keep calm among this because I do work, at night the ear ringing usually increases, I use your CD and I don't hear the noise (cause I hear yours) Ho, but... my heart beat slows down and I can become calm, for real, and sleep.

Testimonial

Finally, given that so many are being assaulted covertly with electromagnetic or ultrasonic energy weapons, since you have a deeper understanding of electronics and radio frequencies than most, can you share with us a little more of your understanding about these frequencies? Most of us understand that our bio-resonance and brain-resonance frequencies are at the low end of the scale between 5-30 Hz, while signals sent in on wi-fi or portable surveillance radar devices may use higher frequencies as carriers; can you explain a bit how this may work?

human brains and identify/track individuals by using digital computers. ESB (Electrical Stimulation of the Brain) via EMF signal from the NSA Signals Intelligence is used to control subjects.

EMF equipment that gathers information from PC circuit boards by deciphering RF emissions, thereby gaining wireless modem-style entry into any personal computer in the country.

All equipment hidden, all technology secret, all scientific research unreported (as in electronic warfare research).

Not known to the public at all, yet complete and thorough implementation of this method of domestic intelligence has been in place since the early 1980s.

TABLE 1: An example of EMF Brain Stimulation.

Brain Area	Bioelectric Resonance Frequency	Information Induced Through Modulation
Motor Control Cortex	10 Hz	Motor impulse coordination
Auditory Cortex	15 Hz	Sound which bypasses the ears
Visual Cortex	25 Hz	Images in the brain bypassing the eyes
Somatosensory	9 Hz	Phantom touch sense
Thought Center	20 Hz	Imposed subconscious thoughts

Excerpt/John St. Clair Akwei vs. NSA, Fort Meade, MD

These constructive interference systems are not bound by Newtonian physics and are almost 100% efficient in energy transference. The College of the Army says psychotronics can be delivered to the enemy though existing wiring or water pipes (used as transducer) in your house. Another way to think of it is wave construction using pieces or pulses assembled only at the target, so they can deliver 5 hz or 9000 MHz depending on results needed.

In closing, what is your best advice re. shielding from these radiation and sonic attacks? Do you have other advice to share?

One of only a few things to stop these weapons is superconductive material, but it is not feasible yet. Soil does lessen it but it takes 350 feet of soil. Other than that you must have an active countermeasure like my CD.

To contact Dave Case for more information or for a free copy of his CD to counter tinnitus, please send him a text message with your name and mailing address at 573-300-1579.

Please note, recent momentous news from World CACH (World Coalition Against Covert Harassment) also offers extensive hope for those being assaulted with V2K technology: a new shielding device, to be presented soon by Magnus Olsson, has been developed with military grade technologies to combat V2K, please see the link below for the World CACH newsletter with this announcement.
