

# Neuro-Electro-magnetic Frequency Weapons

April 27, 2013 taboodada

Personnel Halting and Stimulation Response (PHaSR)

One of the tool used by the military in behavior modification and mind-control is the remotely operated electromagnetic frequency weapons. These weapons use microwave, ELF (Extremely Low Frequencies) and acoustics frequencies to covertly manipulate the minds of persons under attack. The use of frequency weapons upon humans toward behavioral control and murder is not new. For well over 50 years, Neuro-Electro-magnetic Frequency Weapons have been perfected by their covert use in warfare. These 'classified', 'non-lethal' or 'silent' weapons have also been perfected by experimenting on unsuspecting individuals since their early development. Directing a beam of frequencies to a human brain can cause a series of serious side-effects. ELF waves cause nausea, headaches, accelerated heart rate without cause, to name but a few. In 1974, the first unclassified successful transmission of the human voice directly into the skull of a living person was performed by Dr. Joseph C. Sharp, of the Walter Reed army institute of research by transforming a hypnotist's voice using ELF's. This technique was later developed into the Smirnov scramble method, and used in the Gulf War. It is possible to hypnotize a target without the target being aware

and leaving zero trace of evidence.

By emitting frequencies that oscillate in a certain frequency range a victim can be manipulated. There are 6 types of brainwaves: Delta is the frequency range up to 4 Hz and is associated with sleep. Theta is the frequency range from 4 Hz to 8 Hz and is associated with drowsiness, childhood, adolescence and young adulthood. Alpha (Berger's wave) is the frequency range from 8 Hz to 12 Hz. Sensory motor rhythm (SMR) is a middle frequency (about 12-16 Hz) associated with physical stillness and body presence. A target will have trouble moving whenever this frequency is applied. Beta is the frequency range above 12 Hz. Low amplitude beta with multiple and varying frequencies is often associated with active, busy or anxious thinking and active concentration. Gamma is the frequency range approximately 26-80 Hz. Gamma rhythms appear to be involved in higher mental activity, including perception, problem solving, fear, and consciousness. A frequency weapon's shape depends on how frequencies have to be directed to the target. The US Patent and Trademark Office holds a vast amounts of patents for machines which can be

used in direct or subliminal mind-control systems. One of these is a Hearing System, US Patent #4,877,027, by Wayne Brunkan, October 31, 1989. A method for directly inducing sound into the head of a person, using microwaves in the range of 100 MHz to 10,000 MHz, modulated with a waveform of frequency- modulated bursts. Another is the Method and System for Altering Consciousness, US Patent #5,123,899, of James Gall, June 23, 1992. A system for altering the states of human consciousness involving the use of simultaneous application of multiple stimuli, preferably sounds, having differing frequencies. Yet another is the Superimposing Method and Apparatus Useful for Subliminal Messages, US Patent #5,134,484, Joseph Wilson, July 28, 1992. and Method of Changing a Person's Behavior, Subliminal Message Generator, US Patent #5,270,800, of Robert Sweet, December 14, 1993. A combined subliminal and supra-liminal message generator for use with a television receiver; permits complete control of subliminal messages and their presentation.

Also applicable to cable television and computers. Auditory Subliminal Message System and Method, US Patent #4,395,600, Rene Lundy and David Tyler, July 26, 1983. An amplitude-controlled subliminal message may be mixed with background music. And Psycho-Acoustic Projector, US Patent #3,568,347, Andrew Flanders, February 23, 1971. A system for producing aural psychological disturbances and partial deafness in the enemy during combat situations. Enough about the frequency weapons.

The key to projecting commands in the minds of other people rests in understanding what is being communicated. In the 1950's the UK and USA decided to set up the world's biggest espionage network to ensure all communications between Russians and spies or allies was monitored. This system has continuously been updated since its inception. The system's name is Echelon and consists of a vast network of listening posts, extremely advanced computers, an enormous amount of people, dishes and taps. Echelon captures every communication via Internet, GSM, UMTS, landlines, TV and radio broadcasts, satellite communications (private, military and diplomatic) and listens to every word, well the computers do. The computers work with a list of keywords and when a message contains one or more keywords the message is directed to a specialist who examines its content. If the message is 'suspicious' further action is taken.

This Black Government "Silent Weapons" technology has been developed to monitor the location and manipulate the minds of the general populace. Echelon centers are located around the world including Menwith Hill , North Yorkshire, England. HAARP, Remote Mind Control Computer Center, Alaska. And Pine Gap, near Alice Springs, Northern Territory, Australia. ctive Denial System to Displace Crowds

The NSA is also constructing a network of towers up to 500 feet high, each tower at a distance of 200 miles apart and stretching from the east to the west of the US. The network is called GWEN, Ground Wave Emergency Network, and transmits Very Low Frequencies combined with Ultra High Frequencies and is used in case the communication systems in the US are rendered useless because of a nuclear attack. Coincidentally the frequencies of GWEN coincide with the frequencies being used by frequency weapons. If you start thinking about what can happen to a 500 feet high tower when exposed to a nuclear weapon you kind of start thinking if building high structures is the right strategy for nuclear scenarios. Also mobile telephone systems like GSM and UMTS also operate in the same frequency areas as some frequency weapons; this means that these systems, like GWEN, can potentially be used as a weapon, by altering the modulation of the frequencies and the direction of the signal.
