NYC TRANSPORTATION

## Uber and Lyft cars now outnumber yellow cabs in NYC 4 to 1

## SF blasts Uber, Lyft for downtown traffic congestion

Ride-hail companies like Uber and Lytt are being blamed by the San Francisco Municipal Transportation Agency for a lack of regulation that has led to increased trafic in The City. (Ekevara Kitpowsong/Special to S.F. Examiner)

Sy Joe Fitzgerald Rodriguez on December 11, 2016 1:00 am
The potential 45,000 Uber and Lyft drivers circling San Francisco streets for commute fares are gumming up city traffic, according to transit officials.
In a recent state regulatory filing, the San Francisco Munic ipal Transportation Agency took the California Public Utilities Commission - which is tasked with regulating ride-hail companies - to task for failing to reasonably limit the industry's explosive growth.

## City Hall and Uber Clash in Struggle Over New York Streets

By MATt FLEGENHEIMER and EMMA G. FITZSIMMONS JuLY 16 , 2015
© 0

David Plouffe, a top Uber operative, at Sylvia's restaurant in Harlem on Tuesday, was joined by more than a dozen community leaders, all of them critical of a proposed cap on the company's growth. Iryan R. Smith for The New York Times

For months, the clash has seemed inevitable: the professed disrupters of municipal transportation policy and the chief executive of the country's

## INTRO

# Lyft and Uber Won't Release Data to Shed Light on How They Affect Traffic 

By Aaron Bialick Jun 30, 2015

1s ride-hail services like Lyft and Uber have boomed in San Francisco and other cities, proponents claim they help reduce demand for parking and road space by making it easier for people to own fewer cars. But very little data has been released by the ride-hail companies that would allow experts to assess their impact on streets and traffic.

In a panel discussion yesterday, Lyft's Curtis Rogers emphasized that reducing car ownership is "our end goal that we think we share with the city."

But when Thea Selby of the SF Transit Riders Union pressed Rogers for data to show whether Lyft might be substituting for transit trips more than car trips, he said he couldn't provide it. Rogers insisted, however, that Lyft doesn't want to compete with Muni, walking, or bicycling. "We think we're just one more piece to the puzzle."
"We celebrate Muni getting better," said Rogers. "We're well INTRO we pulled everyone off of Muni and put them in

> TRAVEL BEHAVIOR

- Mode Replaced
- Why?

## II. Background

## Operations

- Uber operates globally (450+ cities)
- Uber completed 2 billion trips in the summer 2016
- First billion rides in 6 years
- Second billion in 6 months
- Lyft so far is only in the U.S.
- Lyft is giving rides at a rate of 17 million U.S. rides per month
- Lyft is estimated to have 20\% market-share

## Valuation

- Latest Uber valuation: $\$ 62.6$ billion
- Lyft: \$5.5. billion dollars
- Valuation without owning vehicles, physical infrastructure, or having to hire drivers as employees

## III. Literature Review

## Academic

- Anderson (2014): Interview 20 drivers (Anthropology) about driver strategies and possible VMT impacts
- Cramer \& Krueger (2016): Comparison of UberX with Taxis. Hired by Uber to do the study
- Rayle et al. (2016): Intercept survey in San Francisco comparing ridesourcing with taxis. User characteristics, wait times, and trips served

## III. Literature Review

Organizations

- SUMC (2016): Intercept Survey in seven U.S. cities. Higher use of shared modes, the more likely people use transit and own fewer cars.
- FiveThirtyEight (2015): Used data acquired via a Freedom of Information Act request to the city. In NY, Uber is taking rides away from taxis and covers a larger area

## III. Literature Review

- Review of carsharing literature
- Help develop research methods for this dissertation
- Each Chapter includes a more detailed Literature Review

## III. Literature Review

- Very limited research studies
- Lack of open data
- Levitt, Freakonomics (2016). Why Uber Is an Economist's Dream.
- Independent data questionable
- Research design questionable
- Several gaps

## Book Chapter

## "A Framework for Understanding the Impacts of Ridesourcing on Transportation"

(Henao \& Marshall, 2017)

## Disrupting Mobility

Impacts of Sharing Economy and Innovative Transportation on Cities
Editors: Gereon Meyer, Susan Shaheen

## IV. Research Methods

$>$ Innovative approach to collect data
> Became an independent-contractor to drive for both Lyft and Uber and get access to exclusive data
> Exploratory Analysis
> IRB Approval
> Two Datasets:

1. Driver Dataset (416 rides)
2. Passenger Dataset: (311 Surveys)

## Driver Data Collection Form

## METHODS

## Passenger Survey

## I interviewed passengers during the ride:

> "Hi rider, I'm a grad student doing research on transportation. Would you help me by doing a short survey (~6 minutes) about this ride?
> You can use my tablet or go to this link: www.ride-survey.com.
> Thank you!"

## METHODS

## Passenger Survey

$>$ Passengers took survey on the tablet provided
$>$ On their own devices: www.ride-survey.com
> In some cases, verbal interview
Passenger survey questions:

1. Specific Trip Questions (Q1-Q10)
2. General Use Questions (Q11-Q25)
3. Demographic Questions (Q26-28)

## V. Data

## RIDESOURCING DATA

## Data Analysis

## TRAVEL DISTANCES

$$
\begin{gathered}
d_{\text {shift }}=\left[\sum\left(d_{1}+d_{2}+d_{3}\right)\right]+d_{4} \\
d_{T}=\sum d_{\text {shift }}=\sum d_{1}+\sum d_{2}+\sum d_{3}+\sum d_{4} \\
V M T_{T}=\sum d_{1}+\sum d_{2}+W P M T_{T}+\sum d_{4} \\
V M T_{T}=W P M T_{T}+\text { Additional } V M T
\end{gathered}
$$

Ridesourcing Efficiency Distance $=\frac{\sum d_{3}}{d_{T}}=\frac{W P M T_{T}}{V M T_{T}}$

## ADDITIONAL PERCENT OF WPMT

$$
\frac{\text { Additional } V M T}{W P M T_{T}}=\frac{V M T_{T}}{W P M T_{T}}-1
$$

Total Miles per $100 \mathrm{WPMT}=\frac{100 * V M T_{T}}{W P M T_{T}}$

## TRAVEL TIMES

$$
\begin{gathered}
t_{\text {shift }}=\left[\sum\left(t_{1}+t_{2}+t_{3}+t_{4}\right)\right]+t_{5} \\
t_{T}=\sum t_{\text {shift }}=\sum t_{1}+\sum t_{2}+\sum t_{3}+\sum t_{4}+\sum t_{5} \\
\text { Ridesourcing Efficiency Time }=\frac{\sum t_{4}}{t_{T}}
\end{gathered}
$$

## EARNINGS

$\operatorname{Gross} \operatorname{Earnings}(\$ / h r)=\frac{\sum \text { Driver Earnings (incl.tip) }}{t_{T}}$
Gross Earnings $(\$ /$ mile $)=\frac{\sum \text { Driver Earnings (incl.tip) }}{d_{T}}$
Net Earnings $=$ Gross Earnings - Expenses

## X. Overall Results

## Ridesourcing Times and Distances

> Overall efficiency rate for the study is $39.3 \%$ based on time, and 59.2\% based on distance
> In terms of distance, drivers have to travel 69 extra miles in dead-heading for every 100 miles with a passenger

## X. Overall Results

## RIDESOURCING EARNINGS

> The gross earnings is $\$ 15.69 /$ hour but discounting expenses is less than minimum wage, with an average of \$7.94/hr (tips included).

## X. Overall Results

## Vmt IMPACT

$>$ Ridesourcing provides more mobility:

- 12.2\% of passengers stated that they "wouldn't have traveled"
$>$ But PMT/VMT efficiency goes from 112.3\% to 60.8\%
> Current ridesourcing VMT is $185 \%$ what would have been before, which has significant implications for our cities in terms of congestion and environmental concerns

## X. Overall Results

## Vmt IMPACT

Based on Lyft/Uber current rate of 1 billion rides per year in the U.S. and assuming the results hold true for the country:

| Lyft and Uber rides per year in the U.S. | $1,000,000,000.00$ |
| :--- | ---: |
| $\mathrm{t}_{\mathrm{T} \text { mean }}=(\Sigma \mathrm{d}) /$ ride (Table IV.1) | 11.90 |
| $\mathrm{VMT}_{\mathrm{AFTER}}=$ Rides per year * 11.90 | $11,900,707,268.24$ |
| $\mathrm{VMT}_{\text {AFTER }} / \mathrm{VMT}_{\text {BEFORE }}($ Table V.3) | 1.85 |
| $\mathrm{VMT}_{\text {BEFORE }}=\mathrm{VMT}_{\text {AFT ER }} / 1.85$ | $6,446,228,741.23$ |
| $\mathrm{VMT}_{\text {EXT RA }}=\mathrm{VMT}_{\text {AFT ER }}-\mathrm{VMT}_{\text {BEFORE }}$ | $5,454,478,527.02$ |

Estimated VMT impact from Lyft/Uber is around 5.5 billion extra miles per year in the U.S.

## X. Overall Results

## PARKING

High potential to decrease car dependency
$>$ Ridesourcing is replacing driving modes, reducing the need for parking
> Parking difficulty/expense is one of the main reasons for passengers to use ridesourcing instead of driving.

## X. Overall Results

## TRAVEL BEHAVIOR

$>$ Three common groups of ridesoucing:

1. Drivers
2. Multimodals
3. Non-drivers

- Drivers become bi-modal based on trip purpose
$>$ For typical drivers, ridesourcing is mostly replacing social trips (e.g. go out), to/from airport, and when out of town
> For typical non-drivers, it's replacing work/school trips

## XI. Summary Conclusions

> Opportunities and Barriers
> Policy Recommendations
> Future Applications
> Future Research

## Limitations

This study doesn't come without limitations:
> Trip sample size
> Denver metro area
> Driver strategy

## WE NEED DATA

$>$ Cities and agencies need data - REAL, USEFUL DATA

Highly touted Boston-Uber partnership has not lived up to hype so far

-Robert Galbraith/ Reuters

By Adam Vaccaro June 16, 2016

It was hailed as a milestone for both Boston and Uber in January 2015, when the increasingly ubiquitous ride-for-hire service agreed to share data with City Hall on trips conducted in the city.

## IBER'S IILDILY IIELPFIL DATA TOOL COLLLD IIELP CITILSS FIX STREETS

回 uber

## POLICY DECISIONS

$>$ Cities and agencies need data

- REAL, USEFUL DATA
- BE CAREFUL WITH INFRASTRUCTURE DECISIONS (TRANSIT)

## LYFT AND UBER

> Uber and Lyft are great and could be part of the solution for better transportation systems

- LYFTLINE, UBERPOOL
- DESTINATION FILTER
- PARTNERSHIPS

## Ly

- CAR-OWNERSHIP
- EQUITY (PASSENGERS \& DRIVERS)
> Changing business models
- CAR INDUSTRY
- TAXI INDUSTRY
- STAKEHOLDERS

## THE FUTURE

> Autonomous Vehicles
> Infrastructure Changes
> Transportation as a service

The Future of Autonomous Vehicles

Robin Chase

## ACADEMIA AND RESEARCH

> NEED MORE EMPIRICAL STUDIES
> BETTER RESEARCH METHODS
> BETTER IMPLEMENTATION IN MODELS

- Alonso-Mora, J., Samaranayake, S., Wallar, A., Frazzoli, E., \& Rus, D. (2017). On-demand high-capacity ride-sharing via dynamic trip-vehicle assignment. Proceedings of the National Academy of Sciences.

## FUTURE STUDIES

> Equity Study using the Uber/Lyft API

- Hughes \& McKenzie (2016): Equity study in Seattle
- Yanbo Ge et al. (2016): Discrimination study in Seattle and Boston. African American sounding names.
$>$ Deeper analysis of travel demand models
- Demographics
- Modality resources
- Modality Style
- Mode Choice

## FUTURE STUDIES

$>$ More interesting things on the data

- Parking (extra time and cost)
- Passenger side
- Geographical Variations (e.g. density, urban-suburban)
- Uber/Lyft Estimated Arrival Time (EAT)
- LyftLine/UberPool user characteristics
- Value of Transit increase
- Value of Time
$>$ Austin, Texas

## Impacts of Ridesourcing - Lyft and Uber - on Transportation including VMT, Mode Replacement, Parking, Equity, and Travel Behavior
