

M-Fires Robin Hood Home Defense Pre Evacuation Fire Inhibitor

With our small Robin Hood Home Defense system start kits for \$ 600.00 US you can pour in our fire inhibitor powder and begin to defend by spraying your home, the soffits, roof and even the landscaping. This will make your home way less vulnerable in a fire storm that is moving so fast looking for more easy fuel and oxygen. This product when heated removes oxygen and will slow the advance of any fire. Even on paper towel. This same product can be sprayed on a Christmas Tree and you will not be able to light the tree even with a torch, and it will put the torch out. This product is being used to fire bomb peat fires in other parts of the world. Being that this is water based fire inhibitor it will be removed by washing or falling rain.

M Fires Robin Hood is better at deterring fire than water just make sure to bring all yard furniture inside pack up you valuables and be ready to evacuate before spraying the Robing Hood on everything near you home. When you do leave you will no you have done everything you can even though there is no guarantee.

While our courageous Fire Fighters drop Fire Retardants to defend homes and slow the advance of wild fires, you can now do the same to your home and landscaping before you are told to evacuate.

The Robin Hood Fire Inhibitor has been fighting Peat Fires in Indonesia and now you can use it to defend your home before you are told you have to evacuate.
