Global Campaign for Rwandan Human Rights is an international human right campaign established to promote and campaign on human rights of all Rwandans.

## A - THE SITUATION OF THE FAMINE CRISIS

### 1. The overview

Our investigation has established that since November 2015 more than 3 Million Rwandans are at the verge of starvation and more than 150,000 Rwandans have emigrated out of the country mostly to Uganda due to a ravaging famine, particularly in the Eastern Province districts of Rwamagana, Nyagatare, Bugesera, Kayonza and Kirehe as well as Nyanza and Gisagara districts in Southern Province.

The famine has been named and known as “**Nzaramba**” which means “**I will live long**”

Historically in Rwanda, a situation of scarcity of food has been given specific name only when it became widespread and affected thousands of people. Previous famines that hit Rwanda were Ruzagayura (1943-1944); Rwakayihura (1928-1930); Gakwege also known as Ntunyajweho (1924-1926); Rumanura (1906-1908); Ruyaga (1897-1903) and Rukungugu in middle of 19<sup>th</sup> century.

### 2. The Rwandan official government position

The Rwandan government has blamed the climate change to be mainly responsible for poor harvests in some areas of Rwanda. However, our investigation has revealed that there are many more important causes behind the current famine and increasing poverty in Rwanda including poor agricultural policies, decline of economy, regular distortion of population, lack of freedom of expression.

The State has failed to appeal to the international community to provide food to the affected population simply because It does not want to swallow its pride of being labelled an economic failure, as It has always portrayed itself in the eyes of the International community. However, researchers are starting to piece together a darker story of lies and deceptions which paint a rather different picture of Rwanda as an economic miracle, using cooked growth statistics to portray itself as Singapore of Africa as pointed out by Himbara (2016)<sup>1</sup>.

According to a government report<sup>2</sup>, there are 44,000 poor households (nearly 225,000 individuals) that have been negatively impacted by the drought in the Eastern part of Rwanda. This report has been confirmed by WFP field visits<sup>3</sup>. We found that these reports were very limited to the really cause of food scarcity that lead to the famine crisis and limited to the extent of the problem (numbers of people affected).

The World Food Programme provided some emergency food. Most of those who received food were forced to do community work to compensate for the food received.

Furthermore, as the government controls the media and limits the freedom of speech there is no coverage on full extent of the famine that would have raised its awareness to relevant stakeholders at national, regional and international level. Nevertheless, in July 2016, the Kenyan based newspaper

---

<sup>1</sup> David, H. (2016) Kagame economic mirage. South Carolina: Create Space Independent Publishing Platform

<sup>2</sup> Government of Rwanda: Drought Assessment, 31st May to 3rd June 2016.

<sup>3</sup> 2 Joint P4P/ Vulnerability Assessment and Mapping (VAM) mission the Eastern Province, Rwanda

“The East African” reported that “The famine hit more than 100,000 in the Eastern province of Rwanda”<sup>4</sup>

Our investigation has discovered a rather worrying underreported famine which has devastated the population mainly from the districts cited above, claiming a number of victims and forcing thousands in exile to neighbouring countries.

### **3. International community awareness.**

According to Comprehensive Food Security and Vulnerability Analysis (CFSVA2015)<sup>5</sup> by the World Food Programme, food insecurity remains a major challenge in Rwanda particularly in Rural areas which have the highest percentage of poor and extreme poverty. Households access to food is constrained by poverty, topography and scarcity of arable land, low productivity, inadequate employment opportunities, high food prices, current climate related shocks and conflict in neighbouring countries.

The extend of this situation and consequences to affected populations as well as acknowledgement of the existence of a famine crisis were missing in this WFP analysis.

### **4. Action need.**

Therefore, we are calling for international community **to act fast** and assist Rwandans who are starving as result of “**Nzaramba**” famine. We are calling the government of Rwanda to appeal to the international community for

**food assistance** and allow it to provide **humanitarian assistance unconditionally** in regions affected.

## **B – WHAT CAUSED THE CURRENT FAMINE IN RWANDA**

### **1. Failed agriculture policies.**

According to The Rwandan Ministry of Agriculture and Animal Resources (2010) the agricultural sector accounts for less than 35% of the gross domestic product (GDP) although it provides a livelihood to 90% of the population but only 1% of tradable production.

Although the Rwandan economy depends mainly on agriculture, which supports 80% of the workforce and produces 42% of the GDP (UNDP 2008), the agricultural sector receives a mere 3% of the national budget, a far cry from the 10% threshold recommended by the United Nations Food and Agriculture Organization (FAO). Government spending in Rwanda is clearly oriented away from the food security of the majority, and toward those who will help the government maintain its power. It shows that the government has neglected the agriculture sector in general.

In terms of the agriculture policies Rwanda has embarked on green revolution, which is a policy that forces farmers to **adopt mono-cropping** and **to abandon their multi-cropping** system of farming. According to the Ministry of Agriculture the green revolution was supposed to increase food productivity. However, the result was counterproductive.

The Rwanda government has been forcing farmers to take an economic risk without giving them financial guarantees with regard to the economic viability of the proposed new farming methods. This is because at the end of

the production chain, there is no remunerative prices for agricultural produce. – Secondly: Traditionally in Rwanda farmers have been used to practice farming methods that ensures consistent food security. Not only farming practices introduced by the government destroyed their food security, they did not facilitate availability of substitute or basic food products.

In most cases the financial income of mono-cropping methods promoted by the government did not provide farmers sufficient means that would enable them to afford agricultural produces that they were forced to abandon. – Even though domestic labour is considered "free", the government gives no guarantee that seeds sold to farmers are of good quality, nor does it provide an undertaking to insure farmers or to protect them from paying exorbitant debts incurred as result of buying seeds and fertilizer in the event of bad harvest.

The agriculture failed policies have resulted in food prices soaring up to 400% in the last 2 decades.

Furthermore 2015 Auditor General's report<sup>6</sup> indicated that irrigation equipment procured by government in the district of Nyagatare at a cost of Rwf2.7 billion was not put to use.

Government has promised to help farmers acquire irrigation equipment with a subsidy of up to 50 per cent and link co-operatives to financial institutions, this is however still a pipe dream.

The unaffordability of basic commodities and food also became apparent to a common man due to stagnant salary in public services that do not correlate with the significant increase in food prices.

---

<sup>6</sup> [http://oag.gov.rw/fileadmin/user\\_upload/Procurement/Annual\\_Report\\_2015.pdf](http://oag.gov.rw/fileadmin/user_upload/Procurement/Annual_Report_2015.pdf)

*The table below gives a snapshot of increase of basic food increase in the last 10 years.*

<b>Aliments products</b>	<b>2006:</b> Price/Kg	<b>2017:</b> Price/Kg	<b>Increase</b>
<b>Potatoes</b>	66 RWF	400 RWF	500%
<b>Sweet Potatoes</b>	58 RWF	400 RWF	589.5%
<b>Green Banana</b>	82 RWF	370 RWF	350%
<b>Beans</b>	173 RWF	1000 RWF	480%
<b>Charcoal</b>	3500 RWF/sac	16000 RWF	357%
<b>Meat</b>	700 RWF	2300 RFW	228.5%

Teachers income

<b>Qualification</b>	<b>(A2) primary school teacher</b>	<b>(A1) a diploma holder</b>	<b>(A0) a graduate</b>
Salaries/month	RWF 44,000	RWF 90,000	RWF 120,00

The figures above show an exorbitant increase in food prices since 2006. These are some of the basics food prices consumed on daily basis by many Rwandans. Many households particularly in poor status including teachers in primary schools struggle to provide food to their families. Let us take an example of an average household (3 people) headed by a teacher whose salary is RFW 44,000 per month, which consume 3kg of meat/10kg potatoes/10kg sweet potatoes, 10kg of beans and uses 1 sac of charcoal, which is a monthly average consumption for a small household. The total bill would amount to RWF 38,400. Still, the family will need to pay mutuelle de santé (RWF 9000 ie RWF 3000 per person), school fees, clothing and other important bills which cannot be covered by this salary.

## **2. The myth of economic success shadowing an economic crisis**

---

Rwanda has portrayed itself as an economic lion of Africa (a Singapore of Africa as Kagame described it) boasting an average of 8% GDP for the last ten years with unprecedented economic performance envied by the rest of Africa. It has boasted to have built a modern economy with world class infrastructures, an important ICT and an environment that attracts domestic and foreign investment.

We always hear the Economic miracle that has been achieved after 1994 Genocide. Much of those miracles are credited to the leadership of president Kagame. However, we know now that the said economic progress is a fabrication of Kagame government that has mastered the art of lying. In fact, the government has learned that by exaggerating the achievements the world will buy into it.

The economic growth has been inflated, statistics cooked and worst of all most of the financial institutions who have pumped gigantesque amounts for rebuilding the country know about it but have failed to denounce the country methods mostly because they are in dire need of getting a success story for the aid they give out.

We read stories about the praises and admiration from multilateral donors such as World Bank, IMF and European community from time to time, about the successful economic performance made by Rwanda. Compliments made by the World Bank and IMF, as well as by the European Union that "Rwanda has been an economic success story" in the last decade have been welcomed by the Rwandan government and particularly by the

President Kagame who proudly quotes those references in his economic speeches on the world stage.

If Rwanda economy has been performing successfully as claimed, thousands of Rwandans would not have been affected by the famine and thousands others emigrating to Uganda in search of foods and lands to cultivate without restrictions.

Below are some of the highlight of Rwanda economic:

### **Lower GDP**

Rwanda has got a GDP per capita of USD 1,660 at purchasing power parity (PPP) and gross domestic product of USD 7.8 Billion which is lower than some post conflict countries such as Afghanistan, Sierra Leone and Haiti. Only 16 countries in the world have got a lower GDP per capita. Only two countries in great lakes regions have got lower GDP than Rwanda which include Burundi and Democratic Republic of Congo. Of course, the GDP alone cannot paint the whole picture of the Rwandan economy but shows the overall performance of the economy.<sup>7</sup>

### **High unemployment**

Rwanda population is around 12 million with 56 % that constitute economically active population aged between fifteen and sixty four years. The number of people holding a job in Rwanda's formal economy is 157,827 based on establishment census 2014<sup>8</sup>. Half of those jobs are concentrated in Kigali City which contains 1.1 million people, another half scatted around the county<sup>9</sup>. Only 3% of the active population holds a job in formal economy.

---

<sup>7</sup> <http://data.worldbank.org/indicator/NY.GDP.MKTP.CD?locations=RW>

<sup>8</sup> National Institute of Statistics of Rwanda. "Establishment Census 2014".

<sup>9</sup> ibid

Furthermore, Rwanda has almost no economic sector in which the output is traded internationally, the tradable economic output adds very little to the overall economy. 91% of Rwandans earn a living in services sectors that is overwhelmingly informal, concentrated in only three economic activities – 52,8% percent in wholesale, retail trade, and repair of motor vehicle and motorcycle; 30% in accommodation and food-service activity and 8.5% of services activities including education, health and transportation.

The majority of establishments are tiny according to the 2014 census, the large majority of establishments in Rwanda is characterised as either micro (90.1%) or small 8.7% totalling 98.8%, whereas the large establishments which employ hundred or more workers make up 0.2 %. This has had a bearing on tax collection according to Rwanda Authority data 2013 which show that 0.3 % of all tax payers was responsible for 63,6% percent of tax collection<sup>10</sup>.

The 0.3 % represent 354 of 113,198 of taxpayers in the whole country and is considered as large paying category which is defined as an establishment or an individual with an annual turnover of USD1.4million. Ironically, Kenya that considers large taxpayers as an establishment or an individual with a turnover of 7.2 million USD dollars has recently asked the international Community for assistance to the famine that has affected the country unlike her Rwandan counterpart.

### **Dependency on foreign Aid.**

Rwanda dependency on foreign aid is unprecedented. However, such aid is vital because Rwanda is a poor country. According to world bank (2016)<sup>11</sup> 63% of Rwandans are poor. Rwanda has the highest Aid per capita in the region; it received USD 10 billion in official aid between 1994 and 2013. The annual aid it has received increased from USD 321 million in 2000 to USD 1 billion in 2010. The highest amount in single year was USD 1,2 billion in 2011 before falling to USD 878 million in 2012 due to aid suspension as result of Rwanda's sponsorship of militias in Democratic Republic of Congo. In 2013 and 2014 it rose once again to slightly over USD 1 billion.

However, there has been some general criticisms about aid dependency which affect domestic governance, such as accountability, state expenditure and corruption as well as volatility.

**Accountability:** Stephen Crack (2004)<sup>12</sup>, stresses that if donors provide majority of public finances through aid, recipients governments are accountable to those external agencies, therefore it may not be possible to expect a credible social contract to develop between the government and its citizens; perhaps because it still easier for those countries to manage donors demand than managing the political process of building or improving domestic revenue collection. Aid may consequently undercut its origin intents of promoting accountability, participation and ownership. That is exactly what has happened in Rwanda.

**State expenditure and corruption:** A number of observers have examined the impact of the large aid volume on expenditure and the overall spending and concluded that aid result in excessive and unsustainable spending that lead to macro – imbalance. The higher macro aid of course may affect negatively

---

<sup>12</sup> Knack, S. (2001) Aid Dependence and the Quality of Governance: Cross-Country Empirical Tests. Southern Economic Journal, 68(2), pp. 310-329.

on institutions in various number of ways such as the potential loss of competitiveness that results in lower export and slow economic growth, fewer jobs, and increased dependency on external assistance (Booth 2011).<sup>13</sup>

If in a country, the political system is sustained by clientelist relationship and the power means access to states privileges, aid becomes more desirable for the political management of economic crises therefore states that find it difficult to pay its civil servant are more likely to politicise aid funded workshops, scholarship to study abroad, and other sort of bribes which in the end turn aid in government consumption rather than public investment (Vand de Walle 2001)<sup>14</sup>

**Aid volatility:** Booth (2011)<sup>15</sup> found that aid is more volatile than domestic fiscal revenues and that volatility lessens any potential positive benefits of aid on recipient. Aid often leads to poor budgeting and underestimation of revenues particularly since aid commitments tend to overestimate actual disbursement.

The fiscal uncertainty of dependency on external assistance makes long – term planning extremely difficult. Therefore, it may undermine the government priorities and policies.

### 3. Extortion of the population

---

Some of the Rwanda government practices that have contributed in pushing Rwandans to become moneyless are endless schemes that extort money and assets from them.

These schemes are organised from the local administrative level so that the state can ensure that everyone has participated in monetary contribution to those schemes.

Most popular schemes are:

**Agaciro funds:** A UN report has accused Rwanda to fuel conflict in neighbouring Democratic Republic of Congo by supporting and arming an armed rebellion. Many European countries and international institutions suspended their financial support to the Rwandan government budget as a result.

In August 2012, the Rwandan government reacted by creating Agaciro Development Fund<sup>16</sup> in order to'' *contribute to different development projects that would have otherwise been supported by terminated financial support in the process of increasing financial autonomy of Rwanda'*

The issue with this fund is that the population is requested to contribute to it without considering their financial means. Poor families have been forced to sell their lands, livestock's even their houses in order to contribute to this fund. Most of businesses have also been ordered to contribute too. As result, small businesses have ended up closing their businesses, mostly because Agaciro Funds bills were unfordable.

There are cases in some public services such as hospitals and local authorities have been requesting their service users proof of contribution to Agaciro

---

<sup>16</sup> <http://www.agaciro.rw/index.php?id=2>

Funds as a condition to receive service. Individuals have also been arrested and imprisoned as result of failure to contribute to that fund or failure to provide proof of their contribution.

**Ishema ryacu fund:** 'Our national, our pride'' This fund was established in June 2015 as result of the arrest of former Rwandan chief spy General Karezi Karake in London on an international arrest warrant issued by Spain. This fund aimed to cover of \$1Million of conditional bail granted to him<sup>17</sup>.

Between June and August 2015 across the country individuals and businesses were forced to contribute to this fund demonstrate their patriotism. When General Karake was finally released and got back his bail money none among contributors ever been reimbursed. According to a local newspaper<sup>18</sup>; more contributions were requested from population in order 'to be ready in a case a similar problem arise in the future''

**The Rwandan Patriot Front (RPF) political party contribution:** also known as ''*Umusanzu w'icyama*'' . This fund is collected from population and businesses by local Rwandan Patriot Front (RPF) party officials. Contributing to this fund is not officially compulsory but in practice collectors go door to door requesting that money from people.

Contributing to this fund is considered as a sign of gratitude to the RPF for '*having ended the genocide, saved the country and providing security*'' . Regardless their financial situation, people actively contribute to that fund to avoid being labelled enemy of the State.

---

<sup>17</sup> <http://www.newtimes.co.rw/section/article/2015-07-07/190387/>

<sup>18</sup> <http://www.kigalitoday.com/amakuru/mu-rwanda/Hatangijwe-ikigega-Ishema-ryacu-Fund-kigamije-kugoboka-Abanyarwanda-bahuye-n>

**Local night guards (also known as abanyerondo) fund:** This fund is collected by local authorities' officials or a local nominated community leaders. The money collected are used to cover expenses and sometimes to pay members of local community that have volunteered their time in patrolling their neighbourhoods during night time to ensure local security.

## C - WHY THE WORLD IS NOT AWARE ABOUT THIS FAMINE

### 1. Lack of freedom of speech

Freedom of speech is a fundamental right in any democracy. Rwandan constitution stipulates that freedom of the press and freedom of information are recognized and guaranteed by the State.

Political and civil rights give people the opportunity to draw attention forcefully to general needs and to demand appropriate public action according to Amartya Sen (1999). The response of a government to the acute suffering of its people often depends on the pressure that is put on it. The exercise of political rights (such as voting, criticizing, protesting, and the like) can make a real difference to the political incentives that operate on a government.

in the terrible history of famines in the world as suggested by Amartya Sen (1999)<sup>19</sup>, no substantial famine has ever occurred in any independent and democratic country with a relatively free press. We cannot find exceptions to this rule, no matter where we look: the famines of Ethiopia, Somalia, or other dictatorial regimes; famines in the Soviet Union in the 1930s; China's 1958-61

---

<sup>19</sup> Amartya Sen (1999) Democracy as a Universal Value. Journal of Democracy 10 (3) pp 3-17

famine with the failure of the Great Leap Forward; or earlier still, the famines in Ireland or India under alien rule.

China, although it was in many ways doing much better economically than India, still managed (unlike India) to have a famine, indeed the largest recorded famine in world history: Nearly 30 million people died in the famine of 1958-61, while faulty governmental policies remained uncorrected for three full years. The policies went uncriticised because there were no opposition parties in parliament, no free press, and no multiparty elections. Indeed, it is precisely this lack of challenge that allowed the deeply defective policies to continue even though they were killing millions each year. The same can be said about the contemporary famine occurring right now in Rwanda (*ibid*).

Famines are often associated with what look like natural disasters, and commentators often settle for the simplicity of explaining famines by pointing to these events: the floods in China during the failed Great Leap Forward, the droughts and crop failures in Ethiopia and Rwanda. Nonetheless, many countries with similar natural problems, or even worse ones, manage perfectly well, because a responsive government intervenes to help alleviate hunger including seeking help to the International community. Even the poorest democratic countries that have faced terrible droughts or floods or other natural disasters (such as India in 1973, or Zimbabwe and Botswana in the early 1980s) have been able to feed their people without experiencing a famine (Amartya Sen 1983)<sup>20</sup>.

However, it is not the case in Rwanda, simply because the government is known to undermine the political and civil rights by accumulating power through elimination of potential competition, intimidation of the population by security forces, forcibly killing or putting in jail journalists who criticize the

---

<sup>20</sup> Amartya Sen (1983) Development: Which Way Now?" Economic Journal 93.

government. The Rwandan government has also the reputation to inflate the economic development and to exaggerate through propaganda social economic conditions<sup>21</sup> (including the near absence of unemployment). Therefore, the Rwandan authorities has refused to declare a state of emergency in the worst affected regions where famine has killed hundreds and forced thousands to seek emigrate in the neighbouring countries, particularly in Uganda as result.

Rwanda has deliberately refused to acknowledge the famine and due to its control of the press, media and public freedom expression thus the International community are not fully aware of the extent of the current famine.

## **2. Extensive positive image promotion**

The Rwandan government has worked hard to promote a positive image internationally. UK and US based Public relations firms have been hired to help Rwanda to beautify the profile and reputation at the international scene<sup>22</sup>.

Those firm's roles include "highlighting President Kagame and his visionary leadership" and "The Rwandan Miracle: Healing of a Nation"<sup>23</sup>

President of Rwanda has been invited to speak at Harvard<sup>24</sup> on international development by sharing his success story.

The story of a ravaging famine would not fit with that the positive image that Rwanda government is striving to sustain spending more than \$50,000 per

months on self-promotion, while the income of the average Rwandan is less than \$1000 per year.

## **D - CONCLUSION**

Our report has demonstrated a clear picture, causes and consequences of the hidden famine in Rwanda that is affecting millions of Rwandans and thousands leaving the country in search for food.

It is important that the Rwandan government cease to ignore this problem and take its responsibilities by undertaking all steps necessary that would alleviate suffering of victims of Nzaramba.

The international community should put pressure to the Rwandan government to allow them to fully access all affected areas in order to assess the needs and provide all required support.

## **E- RECOMMENDATIONS**

- **Short term:**
  - ❖ International community should intervene in Rwanda and provide immediate food assistance.
  - ❖ Rwandan government should allow the International Community to establish the exact number of the people and regions affected by the famine.
  - ❖ Organisation of international funding appeal that will be used to address this urgent famine situation.
  - ❖ Neighbouring countries particularly Uganda government should provide humanitarian assistance to Rwandans fleeing the famine crisis.

- ❖ The Rwandan government should unconditionally allow the international humanitarian and aid agencies to intervene freely in investigating and addressing the famine crisis identified.
  - ❖ The Rwanda government should provide the necessary support and assistance to those agencies in their intervention.
  
  - **Long term:**
    - ❖ The Rwandan government should undertake steps to open political space and allow freedom expression and media.
    - ❖ The Rwandan government should undertake steps to review the current agriculture policies.
    - ❖ The Rwandan government should undertake steps to put in place robust mechanisms and procedures that would effectively collect accurate social, economic and health wellbeing of population in order to inform policy making and service delivery.
- 

**GLOBAL CAMPAIGN FOR RWANDANS HUMAN RIGHTS**
