Paul – I am supportive of allowing the Vancouver aquarium to intervene. We will need to look into what, if any permitting is required, or whether a letter would suffice.

**Subject:** Live stranded psuedo orca calf Tofino

Hi Paul & Rebecca,  
A young false killer whale has live stranded in Tofino. DFO communications is on it. The animal seems to be in poor shape. The animal's injuries/condition appears to be natural and not human caused. Calves have a high mortality rate in their first year of life. Parks Canada and DFO fishery officers are on scene monitoring the condition of the animal and holding the animal above the surface. It is not clear at this point if the animal is capable of swimming off on its own. Vancouver aquarium staff are enroute and should be on scene soon. This situation poses several challenges and difficult decisions. If this animal goes to the Vancouver aquarium rehabilitation centre and survives it would not be released back to the wild because of its age. It would become a captive animal. Psuedo orcas can live for upwards of 30 years. Some options on what course of action include:

1) Animal transported back to vancouver aquarium and rehabilitated to become a captive animal.

There are a large number of people at Chesterman's beach and this will be in the media. I have talked with Marie-lyne Trembly ( DFO NHQ marine mammal lead).

Your thoughts on what approach we should take appreciated.  
Cheers,  
Paul

**Subject:** Re: 2014-0180 Beach HP?

Thanks Marty,  
First have to verify species and status of animal. At this point, thought to be a pseudorca. Then determine if this animal is a rehabilitation candidate who can [REDACTED] eventually live in [REDACTED] captivity. An in field assessment will have to be made. Marty, are you not attending on site? I don't know [REDACTED] is he a marine mammal vet? Any decisions will have to be made jointly.

Cheers,  
Paul

I will let you know asap. Trying to get folks on a plane now. Porpoise won't fit on the way back so van is leaving at the same time. Right now the folks on the plane are:

[REDACTED]

It would be incredibly awesome if we could get a vehicle moving towards Nanaimo at the same time from Tofino to minimize the transport time. Any chance of DFO being able to do that?

Hi [REDACTED] here are some pics, I am no expert but I think it is a HP. Parks Canada officers on site now and Denise Koshowski Fishery Officer is on her way. Animal is not actively bleeding out. Folks please refer to the reference number on emails **2014-0180 Beach HP** as it makes it easier for me to track for reporting purposes. Marty do you have an idea of an arrival time and names of personnel so that I can let Tofino folks know? Annely

Hi Paul,

Definitely a Pseudorca. Looks like dependent calf in poor body condition.

We are set at MMR to rehab. Transport vehicles are on the way.

 is our other veterinarian. They are in direct touch with me. Let us know what you think.

Thank you!

Marty
